Population, Marriages, Births, Deaths, and Emigration in 1875 and ten previous years, 5

MARRIAGES :

Their Number and Proportion to the Population,	6
Causes of Low Marriage-rate in Ireland,	6
Number by each mode of celebration in the years 1865-75,	7
Number of Licences issued by Registrars,	8
Number of Licensing Presbyterian Ministers and of Licences issued by them,	8
Number of Buildings registered for Solemnization of Protestant Marriages,	8
Number of Roman Catholic and of Protestant Marriages registered in each quarter of the years 1872-75,	8
Civil Condition of Persons Married,	9
Ages of Persons Married,	9
Signatures to Marriage Registers and Certificates,	10
Marriage-rate in Provinces and Counties,	12

BIRTHS :

Their Number and Proportion to the Population,	12
Causes of Low Birth-rate in Ireland,	12
Proportion of Illegitimate Births in Ireland and the several Registration Divisions,	13
Birth-rate in Provinces and Counties,	14
Number in each quarter of the years 1870-75,	14

DEATHS :

Their Number and Proportion to the Population,	14
Causes of Increase in Death-rate, with General Remarks on the Public Health,	14
Death-rate in the Divisions, Provinces, and certain Counties,	15
Number in each quarter of 1875 and previous five years,	16
Causes of Death.—I. Zymotic Diseases,	16
„ II. Constitutional Diseases,	24
„ III. Local Diseases,	25
„ IV. Developmental Diseases,	27
„ V. Violence,	27
Inquests,	28
Improvement in the Returns of the Causes of Death,	28
Ages at Death,	28

Emigration from Ireland,	29
Prices of Provisions, and Pauperism, in 1875 and previous ten years,	29
Summary of Meteorological Observations, 1870-75,	30
Suggestions for Amendment of Registration and Vaccination Acts,	31

	Page
Table of Meteorological Observations, 1875,	32
Topographical Description of the Eight Registration Divisions of Ireland,	33
Estimated Population of Ireland in each of the years 1801-75,	34

ABSTRACTS:—

Marriages registered in Ireland in each of the Divisions and Superintendent Registrars' Districts, also in each Province and County, in 1875, distinguishing Roman Catholic from Protestant Marriages, and giving the Total Number registered in each Quarter of the Year; the Conjugal Condition of Persons Married; the Number of Minors and of those who signed the Registers by Marks,	36-45
Ages of 14,360 Persons married in 1875, distinguishing those of Bachelors, Spinsters, Widowers, and Widows,	46-47
Marriages, Births, and Deaths registered in each of the Divisions and Superintendent Registrars' Districts, and in each Province and County in 1875; also Births and Deaths, and Excess of Births over Deaths in each of the Registrars' Districts of Ireland, distinguishing the Sexes and Illegitimate Births,	48-72
Births registered in the Divisions and Superintendent Registrars' Districts, and in the Provinces and Counties (distinguishing Males and Females) in each of the Four Quarters of 1875,	74-83
Deaths registered in each of the Four Quarters of 1875 (distinguishing Males and Females), in Divisions and Superintendent Registrars' Districts, also in Provinces and Counties,	84-93
Deaths of Males and Females at different Ages registered in 1875, in Divisions and Superintendent Registrars' Districts, also in Provinces and Counties,	94-101
Causes of Death of Males and Females in Ireland, at different periods of life, in 1875,	102-109
Supplementary Table of Causes of Death of Males and Females, at different periods of life, in 1875,	110-113
Causes of Death of Males and Females in Ireland, and in each of the Divisions, in 1875,	114-121
Deaths from several Zymotic and other Causes in 1875, in the Divisions and Superintendent Registrars' Districts, and in the Provinces and Counties,	122-125
Index to Superintendent Registrars' Districts, and Registrars' Districts,	126-133

REPORT

TO

His Grace, JAMES, DUKE OF ABERCORN, K.G., &c., &c., &c.,
Lord Lieutenant-General and General Governor of Ireland.

MAY IT PLEASE YOUR GRACE,—

I have the honour to submit my Report on the Marriages, Births, and Deaths registered in Ireland during the year 1875, together with the General Abstracts in which the number, season, locality, and special nature of these events are set forth in detail.

Returns prepared from data supplied for the purpose by the several Registrars, and containing approximate information on some of the more salient features of the Registration records, in so far as they relate to the Public Health, were issued after the close of each Quarter; and a preliminary Annual Abstract, compiled from the same sources, was presented to Parliament early in this year.

The information given in those Returns, necessarily imperfect, has since been carefully revised, and in the Abstracts now submitted the corrected results will be found incorporated with many additional features of general interest and utility.

GENERAL SUMMARY.

The Marriages registered during the year number 24,037; the Births 138,320; and the Deaths 98,114. Both absolutely and in proportion to the estimated population, the marriages and births are under, and the deaths over, the annual average for the preceding ten years.

TABLE I.—Showing for each of the years 1865–75, the estimated Population; the number of Marriages, Births, and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby, and the averages for the ten years 1865–74.

YEARS.	Estimated Population.	Numbers Registered.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.			
		Marriages.	Births.	Deaths.		Marriages.	Births.	Deaths.	Emigrants.

1868,	5,465,914	27,699	146,051	86,185	61,018	5.07	26.7	15.8	11.2
1869,	5,449,094	27,277	145,659	89,593	66,568	5.01	26.7	16.4	12.2
1870,	5,418,512	28,667	149,846	90,462	74,855	5.29	27.7	16.7	13.8
1871,	5,395,007	28,960	151,355	88,348	71,240	5.37	28.1	16.4	13.2
1872,	5,372,199	26,943	149,273	97,294	78,102	5.02	27.8	18.1	14.5
1873,	5,337,261	25,730	144,377	97,537	90,149	4.82	27.1	18.3	16.9
1874,	5,314,844	24,481	141,288	91,961	73,184	4.61	26.6	17.3	13.8
Yearly Average, } 1865–74.	5,435,687	28,042	146,330	92,106	79,670	5.16	26.9	17.0	14.6
1875,	5,309,494	24,037	138,320	98,114	51,462	4.53	26.1	18.5	9.7

The number of Emigrants, 51,462, being very much less than for many years past, the decrease in the population did not amount to one half the average annual decrease for the ten years 1865-74. The estimated population in the middle of the year was 5,309,494.

MARRIAGES.

The number of marriages registered during the year is only 24,037, being 1 in every 221, or 4·53 per 1,000 of the estimated population.

This rate, which is lower than that for any of the ten years 1865-74, is very much under the marriage-rates in other countries the statistics of which are available.

There is no doubt that a portion of this disparity is due to defective registration; but the loss to be set down to this cause is not so great as might at first sight appear and the actual marriage-rate in Ireland, in proportion to the total population is, unquestionably, low.

This is, in part, accounted for by the abnormal conditions arising from a large annual emigration of unmarried persons of what may be called the marrying ages. The consequent reduction of the sources from which the marriage ranks are recruited is accompanied by an undue increase in the proportion of the population embraced in the other age-periods, and the result tends to produce a low rate compared with the number of inhabitants at all ages.

Again, amongst the actual population, the marriage-rate is evidently low. Thus, from the last Census Reports it appears that, while in England the per-centage of men aged 20 years and upwards who were unmarried was only 27·1, in Ireland the unmarried formed 38·3 per cent. of the total at the same ages.

But the returns now under notice in themselves contain proof of the comparative paucity of marriages in Ireland.

The provisions of the law respecting the registration of Protestant marriages are such that it is all but impossible any should remain unaccounted for; yet, compared, say, with the general marriage-rate for England, the result appears very unfavourable. Thus the average annual rate in England is 1 in every 119 persons, or 8·4 per 1,000 of the population, while the Protestant marriages in Ireland last year only equal 1 in 168, or 5·97 per 1,000 of the estimated Protestant population.

There are no grounds for assuming that marriages are proportionately more numerous among the Roman Catholic than among the Protestant inhabitants; so that marriages of the latter, if, indeed, not much over the general rate, are certainly not under it, and the extent to which the registered Roman Catholic marriages fall short of the rate yielded by marriages of Protestants is the maximum possible loss by non-registration.

The Roman Catholic marriages registered last year only afford a rate of 1 in 245, or 4·08 per 1,000 of the estimated Roman Catholic population, which, as may be seen, is much under the rate for Protestant marriages.

There are no precise data for determining how far this can be satisfactorily accounted for; but, as the Roman Catholic inhabitants constitute the great majority of the people and include the large mass of the humbler classes, there seems but little doubt that the depression in the marriage-rate, referred to above as resulting from emigration, would be

most apparent amongst them, and also that any economic reason leading to a low rate would be likely to affect them to a greater extent than it would their Protestant fellow countrymen.

It is, however, to be feared that, after making all due allowances, the unregistered marriages, which, as may be gathered from what has been stated above, are confined to those of Roman Catholics, are still numerous.

There is no valid reason why they should be so. The trouble involved in complying with the law regarding the registration of Roman Catholic marriages is reduced to a minimum, while the individual and the national value of a perfect record is manifest, and ought to secure the willing co-operation of all concerned.

Dealing with the returns for last year, it is found that of the 24,037 marriages registered, 16,589 were between Roman Catholics, 4,088 were celebrated according to the rites and ceremonies of the late Established Church; 2,495 were in Presbyterian Meeting-houses; 326 in "Registered Buildings" belonging to various religious denominations; only 522 by civil contract in the Registrars' offices; 14 were according to the usages of the Society of Friends, and 3 according to the Jewish rite. The small number of marriages in the Registrars' offices is in striking contrast to the proportion of civil marriages in many other countries, and, so far from showing signs of an increase, is less than one-half the number of such marriages in 1865.

TABLE II.—Marriages registered in Ireland in 1875 and each of the previous ten years, according to the modes of celebration; with the rate per 1,000 of the population represented:—

Average 1865-74, ..	4,589	2,601	253	756	13	2	8,214	19,828	28,042	6.55	4.67	5.16
1875, ..	4,088	2,495	326	522	14	3	7,448	16,589	24,037	5.97	4.08	4.53

Of the 4,088 marriages according to the rites of the late Established Church, 74 were by special licence, 3,233 by licence, 505 after the publication of banns, 21 on Registrar's certificate, and in 255 instances there was no information afforded as to which of the foregoing methods was adopted.

During the year 1875 there were issued by the Registrars 678 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1875.	Number of Registered Meeting-houses on 31st December, 1875.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland,	131	554	2,372
2. Remonstrant Synod of Ulster,	9	21	53
3. Presbytery of Antrim,	4	9	17
4. United Presbytery or Synod of Munster,	3	4	—
5. Northern Presbytery of Antrim,	1	5	17
Total,	148	593	2,459

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1875, there were 1,509 churches and chapels of the late Established Church, 594 registered Presbyterian Meeting-houses, and 285 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show an increase of 3 as regards the late Established Church, an increase of 1 Presbyterian Meeting-house, and an increase of 10 "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1875:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Wesleyan Methodists,	157	United Original Seceders,	1
Reformed Presbyterians,	37	Protestant Dissenters,	1
Independents,	21	Christians,	1
Baptists,	17	Non Subscribing Unitarians,	1
Seceders,	11	"The Catholic Apostolic Church,"	1
United Presbyterians,	9	Primitive Methodists,	1
Primitive Wesleyan Methodists,	8	Christian Brethren,	1
Methodists, New Connexion,	7	Independent Protestants,	1
Moravians, or United Brethren,	5	Jews,	1
Evangelical Union,	2		
Church Methodists,	1	Total,	285
Covenanters,	1		

As more than a moiety of the annual number of Roman Catholic marriages in the provinces of Munster and Connaught are celebrated between Christmas and Shrovetide, the marriages registered in Ireland during the first quarter of the year always largely outnumber those in any of the other quarters. Owing, probably, to the early Lent of 1875, this difference is

not so great as usual, but it is still very marked; the numbers recorded were—in the first quarter 8,403; in the second, 5,122; in the third, 5,120; and in the last, 5,392.

TABLE III.—The Number of Roman Catholic and of Protestant Marriages registered in each Quarter during the last four years:—

QUARTER ENDING THE LAST DAY OF	Years and Number of Marriages Registered.							
	1872.		1873.		1874.		1875.

December, .	3,636	2,150	3,407	2,034	3,245	1,883	3,367	2,025
Total, .	18,932	8,011	18,129	7,601	17,348	7,133	16,589	7,448
General Total,	26,943		25,730		24,481		24,037	

The marriages of bachelors and spinsters constitute 84·8 per cent. of the total; those of widowers and spinsters 9·2 per cent.; of bachelors and widows 3·2 per cent; and of widowers and widows 2·8 per cent. Thus, 12 in every 100 of the men married were widowers, and 6 per cent. of the women were widows; and in 15 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

A complete registry of the exact ages of the persons married would be valuable from many points of view; hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or "of full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as last year the ages of both parties were specified in only 7,180 instances being considerably less than one-third of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 24,037 men married during last year, 665, or 2·77 per cent. were minors; and of the women married, 3,042, or 12·66 per cent. were under age. The per-centage of husbands married under age is slightly over the average for the preceding ten years, while, as regards the wives, the proportion under age, though somewhat greater than in either 1873 or 1874, is much under the average for the ten years, there having been a remarkable gradual decline from 16·65 per cent. in 1865 to 11·87 per cent. in 1874.

The highest proportion of husbands married under age last year, 3·79 per cent., was in the North-Eastern Division, which includes Belfast and nearly all the northern manufacturing districts; and the highest per centage of wives, 19·28, was in the Western Division. These results coincide with those in the preceding ten years.

It may be added, that the per-centage of persons married in Ireland

who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificates afford a rough test of the progress of elementary education. Last year 16,757, or 69·7 per cent. of the husbands, and 15,215, or 63·3 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures, though slightly less favourable than in the preceding year, and still leaving much to be desired, contrast hopefully with those of eleven years since, the per-centage of persons married in 1865 who wrote their names being—men 59·6, and women 48·3.

As usual, the most favourable results appear in the Eastern or Metropolitan Division, and the least satisfactory in the Western Division, the number who wrote their names varying from 79 in every 100 men and 75 in every 100 women in the former, to 55 per cent. of the men and 51 per cent. of the women married in the latter division.

The number of marriages registered in each of the eleven years 1865–75; the proportion per cent. of persons married who wrote their names in the registers, of minors, of widowers, and of widows, are given in the following table, for the several registration divisions:—

TABLE IV.—The Number of Marriages in the Eight Registration Divisions of Ireland* during the years 1865–75, and proportion per cent. of Persons who signed their Names, of Persons not of Full Age, and of Re-marriages.

Registration Divisions.*	Number of Marriages.	Signed their Names in Writing.		Persons not of Full Age.		Re-marriages.

1875	3,484	67·9	59·6	3·24	14·67	12·00	6·92		

In the province of Leinster, 74·4 per cent. of the men, and 71·4 per cent. of the women married wrote their names; in Ulster, 71·9 per cent. of the men, and 62·5 per cent. of the women; in Munster, 68 in every 100 men, and 61 in every 100 women; and in Connaught, only 56·6 per cent. of the men, and 52·1 per cent. of the women.

In 5,463 instances, both of the parties married signed the register by "mark," and in 5,176 cases the register was thus signed by either the husband or the wife, so that in 10,639 instances, or 44·3 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 13,398 instances, or 55·7 per cent., *both* parties wrote their names.

In proportion to the estimated population at all ages the registered marriages were most numerous in the province of Leinster in which, however the rate was only 5·1 per 1,000 persons; Ulster comes next, with 4·7 per 1,000; Munster third, with 4·4 per 1,000; and Connaught last, the rate being only 3·6 per 1,000.

The highest rate in any county was 7·1 per 1,000, which was the marriage rate for Dublin; and the lowest 3·1 per 1,000 for Meath and Cavan. Between these, the most favourable were 6·5 for Antrim, 5·0 in Armagh, and 4·9 in Down and Kilkenny; and the least so, 3·2 in Galway, and 3·4 in Donegal.

BIRTHS.

The number of births registered during the year 1875 is 138,320—71,118 boys, and 67,202 girls, or 105·8 of the former to every 100 of the latter—the rate afforded in proportion to the total population being 1 in 38·4, or 26·1 per 1,000.

As has been already stated, the rate is somewhat under the average (26·9) for the preceding ten years. It is, in fact, lower than for any of the ten years, except 1865, the second year of registration, in which the rate was only 25·9 per 1,000.

It has been seen that the marriages *registered* in Ireland, when compared with the total population, fall far short of the proportion in England. The births, too, present a contrast—not, indeed, so striking, but still sufficiently so to call for explanation; the average rate in England being 35·4 per 1,000 persons, against 26·9 per 1,000 in Ireland.

A large portion of the disparity between the marriage rates has been accounted for, and shown to be owing to the special circumstances of Ireland, and it is obvious, that, speaking in general terms, there must be a corresponding difference between the birth-rates.

Pursuing the inquiry with special reference to births, and omitting, for the present, those of children born out of wedlock, it is found that the average rate of legitimate births in England for the ten years 1865–74 was 33·4 per 1,000 of the population, and that the corresponding rate in Ireland was only 26·1 per 1,000.

The conclusion at first naturally suggested by these figures is that the registration of births in Ireland must be very defective; but, on examination this proves to be, in great part, erroneous.

In 1871, according to the Census, the married women in England between the ages of 15 and 55, which may be taken as the limits of the childbearing period, formed 14·7 per cent. of the total population at all ages, and in Ireland the corresponding proportion was only 11·8 per cent.,

or, in other words, there were five married women, possible mothers, in England to 4 in an equal number of the population in Ireland. Taking the ages 15 to 45 years, the difference is even greater.

Assuming the actual births to be in the same ratio to the number of married women in each of the two countries, it is evident that the births in any given number of the total population in Ireland must be less than the corresponding rate in England to the extent that the proportion of married women in the former country falls short of that for the latter.

This being so, the respective rates for legitimate births, given above, namely, 26·1 per 1,000 persons in Ireland, and 33·4 per 1,000 in England, are reconcilable, as they bear the same ratio to each other as the relative proportion of married women in the population; and, looking at the numbers from another point, it is found that the births in England are annually equal to 224 to every 1,000 mothers, and that the registered births in Ireland, equal 223 per 1,000.

There is a popular opinion that the mothers of Ireland are more fruitful than those of England; but this if true in the abstract, must, under present conditions, be to a certain extent neutralized by the comparatively late period of life at which many marriages in Ireland now take place.

Of the 138,320 children whose births were registered in Ireland last year, 135,166, or 97·7 per cent., were legitimate, and 3,154, or 2·3 per cent., were illegitimate. The average per-centage of illegitimate births in the preceding 10 years was 2·9.

It is needless to say that these results compare very favourably with similar returns for most other countries.

Of the children born in wedlock last year, 69,518 were males, and 65,648 females, being 106 of the former to every 100 of the latter; and of the illegitimate children 1,600 were males, and 1,554 females, or only 103 boys to 100 girls.

TABLE V.—The Per-centage of Legitimate and Illegitimate Births registered in Ireland during the years 1871–75, by Divisions.

Divisions.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1871.	1872.	1873.	1874.	1875.	1871.	1872.	1873.	1874.	1875.
IRELAND, . . .	97·3	97·5	97·6	97·7	97·7	2·7	2·5	2·4	2·3	2·3

Eastern, . . .	97·7	97·8	97·8	97·9	98·1	2·3	2·2	2·2	2·1	1·9
North Midland, . . .	98·1	98·2	98·5	98·6	98·6	1·9	1·8	1·5	1·4	1·4
South Midland, . . .	97·4	97·8	98·1	97·7	98·1	2·6	2·2	1·9	2·3	1·9
Western, . . .	99·0	99·2	99·2	99·2	99·2	1·0	0·8	0·8	0·8	0·8
South-Eastern, . . .	96·7	97·3	97·0	97·4	97·3	3·3	2·7	3·0	2·6	2·7
South-Western, . . .	98·4	98·6	98·7	98·7	98·7	1·6	1·4	1·3	1·3	1·3

As in previous years, the lowest per-centage of children born out of wedlock was in the Western Division, and the highest in the North-Eastern division. The order of the several divisions is as follows:—Western 0·8 per cent. of total births; South-Western, 1·3; North Midland,

1·4; South Midland, 1·9; Eastern, 1·9; North-Western, 2·2; South-Eastern, 2·7; and North-Eastern, 4·6.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·7; in Leinster, 2·0; in Munster, 1·6; and in Connaught, 0·7.

The extremes of the county rates are found in Down and Mayo. In the former of 5,973 births registered, 350, or 5·9, per cent. were illegitimate, and in the latter, out of 6,241 births recorded, only 31, or 0·5 per cent., were so classed.

The respective total birth-rates for the provinces last year were—Munster, 27·9 per 1,000 of the population; Ulster, 25·6 per 1,000; Connaught, 25·4, and Leinster, 25·3.

The four counties having the highest rates were—Kerry, 32·2 per 1,000 inhabitants; Antrim, 30·0; Limerick, 27·9; and Cork, 27·8. Those with the lowest rates were—Westmeath, 22·6; Monaghan, 22·7; Fermanagh, 23·2, and Wicklow, 23·4 per 1,000 persons.

Of the total births, 53·3 per cent. were registered in the first six months of the year (181 days), and 46·7 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 36,378; in the second, 37,405; in the third, 32,588; and in the fourth, 31,949.

TABLE VI.—Showing, by **Quarterly Periods**, the number of **Births** registered in Ireland in each of the five years 1870-74, and the average number for that period; also the number registered during each quarter of the year 1875:—

DEATHS.

The deaths registered during the year amount to 98,114, being equal to 1 in 54, or 18·5 per 1,000, of the estimated population. The deaths of males number 48,924, and those of females 49,190, the former being equal to 19·0 in every 1,000 males living, and the latter representing 18·0 per 1,000 females.

The total death-rate is higher than that for any of the years 1865-74, and is 1·5 in every 1,000 inhabitants over the average rate for the 10 years. The increase occurs in deaths from diseases of the respiratory organs and those from old age, and, doubtless, was caused by the harsh weather during a great portion of the year, there having been an unusual

frequency of easterly winds, and yet a rainfall much over the average for the 10 years 1865-74.

With the exception of scarlet fever and its kindred disease, diphtheria, zymotic diseases of a preventable nature were less fatal than usual. Scarlet fever, however, which was epidemic in the province of Ulster, caused a large number of deaths, especially in the first half of the year. During the same period, also, small-pox had many victims in the province of Connaught, in some districts of which, unhappily, the spread of this loathsome disease was much helped by the pernicious practice of inoculation.

The deaths from the eight principal zymotic diseases registered during 1875 form 12·1 per cent. of the deaths from all causes, and are equal to 223 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represents 13·5 per cent. of the average number of deaths from all causes, and is equal to 230 in every 100,000 of the estimated population.

The Public Health Act has been in force for too short a period to permit of a reliable analysis of the changes in the amount of disease and mortality wrought by its operation; but, from the concurring testimony of Registrars in various parts of the country, there can be no doubt of the salutary results of a prudent administration of its provisions.

Sanitary improvements have made satisfactory progress in many districts, and the Registrars testify to the benefits thereof. Unfortunately, however, there are many districts in which sanitary improvements are sadly needed.

As the principal notes on the public health furnished by the various Registrars were published in the quarterly returns at a time when they should have proved most likely to secure an abatement of then existing evils, it is unnecessary to reproduce them; but I regret to state that, according to the Registrars' reports, in several instances the Local Authorities evinced an unaccountable reluctance to remedy some glaring defects in the system of sanitation.

The death-rates in the eight divisions range from 14·6 per 1,000 persons in the Western to 21·9 in the Eastern. The following is the order of the several divisions (as usual, those along the Eastern coast have the highest mortality):—Western, 14·6 per 1,000 persons; North Midland, 16·4; North-Western, 16·9; South Midland, 17·8; South-Western, 17·9; South-Eastern, 19·6; North-Eastern, 20·5 and Eastern, 21·9.

With respect to the four provinces, the rate for Connaught is only 14·6; that for Munster is 17·9; for Ulster, 19·1, and for Leinster, 20·7.

Of the thirty-two counties, the four having the lowest registered mortality are—Roscommon, only 14·1 per 1,000; Mayo, 14·3; Galway, 15·0; and Fermanagh, 15·0.

Those in which the rate was highest are—Dublin, 25·5; Antrim, 22·2; Carlow, 21·1; and Waterford, 20·8.

The deaths registered in the first half of the year always largely outnumber those in the second. Last year the excess was greater than usual, 57·0 per cent. of the total deaths having been registered from January to June inclusive, and only 43·0 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follows:—First quarter, 23·1 per 1,000 of the population; second, 19·1; third, 14·5; and fourth, 17·3.

TABLE VII.—Showing, by **Quarterly Periods**, the number of **Deaths** registered in Ireland in each of the five years, 1870–74, and the average number for that period; also the number registered during each quarter of the year 1875:—

QUARTER ENDING	Years and Number of Deaths Registered.							Equivalent Annual Rate per 1,000 of Estimated Population.	
	1870.	1871.	1872.	1873.	1874.	Average Number 1870-74.	1875.	Average 1870-74.	1875.

CAUSES OF DEATH.

I.—ZYMOTIC DISEASES.

The deaths from all diseases of this class registered in 1875 amount to 16,254, or 306·13 in every 100,000 of the estimated population. This mortality differs very slightly from the average annual number in the preceding 10 years, which was 16,649, or 306·29 in every 100,000 of the estimated mean population in that period. There are, however, considerable variations in the rates for the several divisions; thus, that for the North-Eastern is 417·78 per 100,000 persons, against an average rate of 335·41 for the 10 years 1865–74; in the North-Western, too, the rate increased from an average of 214·74 to 303·87 for last year; while in the Eastern it fell from 420·37, the average, to 341·92 for last year; and in the South-Eastern the rate for last year was only 207·39, while the average for the 10 years 1865–74 was 310·00.

The highest rate last year was 417·78 (in the North-Eastern division), and the lowest 207·39 (in the South-Eastern division). Taking the average for the preceding 10 years, the highest was 420·37 (in the Eastern Division), and the lowest 217·15 (in the North Midland).

Zymotic diseases proved most fatal in the first quarter of the year, in which 4,693 or 28·9 per cent. of the total number, were registered; the registered mortality in the second quarter was 4,115, or 25·3 per cent. of the total; in the third, 3,645, or 22·4, per cent.; and in the fourth, 3,801, or 23·4 per cent.

Of the 16,254 deaths from these diseases, 9,821, or 60·4 per cent., were amongst children under 10 years of age, being equal to a mortality of 8 in every 1,000 children living at that age.

TABLE VIII.—Showing, by DIVISIONS, the Number of Deaths from the principal Zymotic Diseases and from all diseases of that class registered in Ireland during the Ten Years 1865-74; the Average Annual Number for that period; and the Average Annual Rate per 100,000 of the Estimated Population; with the Number registered in 1875, and the Rate represented thereby.

Small-pox.—The number of deaths caused by this disease is 535, or 10 in every 100,000 of the population; the average annual number in the preceding ten years (including 1872, in which 3,248 deaths resulted from small-pox) was 574, the number for 1874 being 569. The deaths from small-pox last year were almost exclusively confined to the Western Division, in which 487, or 65 in every 100,000 inhabitants, occurred; 330, or 137 per 100,000 persons, having taken place in the county of Mayo, where, unfortunately, inoculation was extensively practised. Taken in connexion with the heavy mortality in Mayo county, the following remarks are significant. Writing at the close of the first quarter, the Registrar of Castlebar, No. 1, in that county, reported: "The condition of my district would be highly satisfactory were it not that small-pox has made its appearance, and that the disease is propagated by the extensive practice of inoculation;" and the Registrar of Balla, in the same union and county, stated that "Small-pox of a very malignant type caused 36 deaths. Inoculation is still carried on to a great extent in my district." The Registrar of Ballinrobe District, Ballinrobe Union, also in the county of Mayo, remarked, "Small-pox of a bad type broke out in this district; I believe it was introduced by inoculation;" and the Registrar of Hollymount, another district in Ballinrobe Union, reported, "The district is remarkably free from zymotic disease, small-pox being the only form present, of which a few cases occurred (1 death registered) of a most virulent form, and in several cases attacking persons who had before had the disease from inoculation, though, curiously enough, it spared persons who had been vaccinated living in the same houses."*

Only 2 deaths from small-pox were registered in the province of Munster, 11 occurred in Leinster, 32 in Ulster (against 381 in the preceding year), and the remaining 490 in Connaught.

The deaths in the first quarter numbered 230, in the second 222, in the third 71, and in the fourth only 12.

Measles.—The deaths from measles were more numerous than in the preceding year, but less than the average for the ten years 1865-74. The number for last year is 898, or 16·91 in every 100,000 of the population; for 1874, 667, or 12·55 per 100,000 persons, and the average for the ten years 1,023, or 18·82 in every 100,000 of the mean population for those years. Of the deaths last year 512, or considerably more than one-half, occurred in the North-Eastern Division, the proportion to the population being 46·22 in every 100,000; only 9 took place in the South Midland Division. The deaths in the former division include 311 which occurred in the Union of Belfast.

There is but little difference in the numbers for the respective quarters of the year; that for the first is 213, for the second 225, for the third 236, and for the fourth 224.

Scarlet Fever.—As before stated, this disease proved very fatal, but the mortality was not quite as heavy as in the preceding year, the deaths amounting to 3,845 (2,034 males and 1,811 females), or 72·42 in every 100,000 of the population, against 4,034 in the year 1874. The average mortality for the ten years 1865-74 was 2,947, or 54·22 per 100,000. The divisions which suffered most last year were the North-Eastern and the North-Western, the rate in the former being 146·24 per 100,000 persons, and in the latter 136·55. In the Eastern Division, where the disease was proportionately most fatal during 1874, in which the deaths equalled 152·04

* See Quarterly Returns for 1875, page 37.

per 100,000 persons, the rate for last year was 78·97. Only 45 deaths were registered in the South-Eastern Division, against 245 during the preceding year.

The disease was remarkably fatal in some districts; thus, in the Union of Carrickmacross the deaths (78) from scarlet fever are equal to 3·8 in every 1,000 persons; in the Union of Inishowen to 3·3 per 1,000; and in the following unions they exceeded 2 per 1,000 of the population in 1871, viz.:—Belfast, Cookstown, Larne, Lurgan, and Newtownards, in the North-Eastern Division; Londonderry in the North-Western, and Bailieborough in the Eastern.

The distribution of the deaths from scarlet fever through each of the four provinces is as follows:—Ulster, 2,558, or 66 per cent. of the total; Leinster, 699; Connaught, 356; and Munster 232, of which 194 were in the county of Cork.

The disease proved most fatal in the earlier part of the year, the deaths for the first quarter being 1,190, for the second 938, for the third 818, and for the fourth 899.

The great bulk of the deaths from scarlet fever were amongst children under 10 years of age, the number for that age period being 3,111, or 81·8 per cent. of the total.

Diphtheria.—This disease caused 443 deaths, against 565 in the preceding year, and an annual average of 299 for the ten years 1865–74. The highest mortality in proportion to the population (13·14 per 100,000 persons) was in the Eastern Division, and the lowest (2·80) in the Western.

Quinsy.—The deaths from quinsy numbered 273, being 18 less than in the preceding year, and 27 under the number for 1873.

Croup.—There were 1,731 deaths referred to this cause, being 68 under the number in the preceding year, but still considerably over the average. As in previous years, the deaths of males are much in excess of those of females, the numbers being 947 of the former and 784 of the latter. The Western and South-Western Divisions, as usual, had the largest mortality.

The numbers for the several quarters of the year are—first, 591; second, 444; third, 293; and fourth, 403.

Whooping-cough.—The deaths from whooping-cough are much under the average. They number 1,376, or 25·92 in every 100,000 of the estimated population, against 2,029 in the preceding year, and an average of 1,785 for the ten years 1865–74. The rates varied from 10·95 per 100,000 persons in the South-Eastern Division to 39·39 in the North Midland. There were only two Unions in which the deaths from this disease equalled 1 per 1,000 of the population, namely, Glenties, in the North-Western Division, and Mohill, in the North Midland. Of the total deaths, 552 occurred in the province of Ulster, 283 in Connaught, 290 in Leinster, and 251 in Munster. While the returns for several years past show that more males than females succumb to croup, the contrary is the case with regard to whooping-cough, the numbers for last year, which are not exceptional, being—males 596 and females 780.

Deaths from whooping-cough were most numerous in the last quarter of the year, when 415 deaths were recorded; the number for the first quarter is 327, for the second 300, and for the third 334.

Fever.—Under this heading are included deaths from typhus, enteric or typhoid fever, and simple continued fever. The total number for last year is 2,854 (1,467 males and 1,387 females), or 53·75 in every 100,000

of the population, being 12·44 per 100,000 persons under the average rate for the preceding ten years. The highest divisional rate per 100,000 persons last year is 66·29 for the South-Western Division, and the lowest is 36·36 for the North Midland, which had also the lowest average rate (46·34) for the ten years 1865--74. The South-Western Division is the only one in which deaths from fever are over the average, and the state of things disclosed in the observations of many of the Registrars in this division, justifies the remark of one of them, that "there is strong evidence of its being a filth disease."* The rates for some of the other divisions show a remarkable decrease; thus the rate for the Eastern is 59·78, against an average of 86·33; that for the South Midland, 53·35, against 75·30; for the North-Eastern, 55·52, against 70·68; and for the North-Western, 38·18, against 56·14. In the South-Eastern Division, although the rate (61·60) is somewhat under the average for the ten years, still it exceeds that for any of the years in the latter half of the decade; and in the Western, in which there had been a gradual increase in the mortality, from 339 deaths, in 1869 to 527 in 1873, the deaths, which fell to 415 in 1874, still further declined to 371 last year, the rate afforded thereby being 49·40 per 100,000 persons, against an average of 57·18 for the ten years 1865--74.

There were only 6 unions in which the deaths from fever equalled 1 per 1,000 of the population, viz.:—Castlecomer, in the South Midland Division; Ballyvaghan and Killala, in the Western; and Cahersiveen, Killarney and Kinsale, in the South-Western.

With respect to the four provinces, there were 875 deaths, or 0·64 per 1,000 inhabitants in Munster; 741, or 0·58 per 1,000, in Leinster; 882, or 0·48 per 1,000, in Ulster; and 356, or 0·43 per 1,000, in Connaught.

Fever was most fatal in the first quarter, during which 792 deaths were registered; the number in the second quarter was 789; in the third 659; and in the fourth 614.

TABLE IX.—Showing for the year 1875 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the estimated number living at each Age represented thereby.

* Remark by Registrar of Newmarket District, Kanturk Union, county of Cork, Quarterly Returns, 1875, p. 172.

† Including deaths returned as from "fever."

Of the 2,854 deaths tabulated under the head of fever, 694 were returned as from typhus, 833 from enteric or typhoid fever, and 1,327 from simple continued fever or vaguely as from "fever."

As in the preceding year, the age periods 15 and under 20 years, and 65 to 75 were those in which fever proved most fatal in proportion to the living at the same ages; the rate for the former age period in 1874 was 83·52 per 100,000, and in 1875 74·96; and for the latter, in 1874 83·35, and in last year 76·09.

The lowest rate for last year is 34·82 for the period 5 and under 10, and the lowest in the year 1874 was 41·62, the rate amongst children under 5 years of age.

Erysipelas.—There were 392 deaths referred to erysipelas, being more than in any of the preceding ten years, and 35 per cent. over the average. Both numerically and in proportion to the population the mortality was highest in the Eastern Division, in which 109 deaths were registered, of which number 63 occurred in the two metropolitan unions.

Metria or Puerperal Fever.—This disease also proved more fatal than usual; the average number of deaths for the ten years 1865–74 is 315: last year the number rose to 442. There is no doubt a portion of this increase is only nominal, and arises from a more accurate registration of the cause of death; some deaths which would formerly have been returned as from "childbirth" being more correctly described as from metria or puerperal peritonitis.

Influenza.—One hundred and twenty-four deaths resulted from this cause, being 24 over the number in 1874, but 21 under the average for the ten years 1865–74.

Dysentery.—Only 231 deaths were caused by dysentery, against an average of 403 for the ten years 1865–74. As in previous years, the disease was much more fatal in Munster than in any of the other provinces.

Diarrhœa.—The deaths from diarrhœa numbered 1,824, or 34·35 in every 100,000 of the population, against 1,671 in the preceding year, and an average of 1,908, or 35·10 per 100,000 of the mean population, for the ten years 1865–74. The highest divisional rate is 48·96 per 100,000 for the Eastern Division, and the lowest 13·94 for the North Midland. The low diarrhœal death-rates, not only last year but for the preceding ten years, in the North Midland, North-Western, and Western Divisions, are noteworthy when compared with those for other parts of the island. For example, the average rates for these divisions are—North-Midland, 19·00; North-Western, 19·28; and Western, 19·75 per 100,000; and the rates for last year 13·94, 18·31, and 18·51 respectively; while the lowest average for any of the other divisions is 35·84, and the lowest rate last year 38·56.

In none of the 163 unions did the mortality from this disease last year equal 1 per 1,000 of the estimated population.

The rates for the provinces are as follows:—Leinster, 42·5 per 100,000; Munster, 41·4; Ulster, 31·8; and Connaught only 15·6.

Of the 1,824 deaths from diarrhœa 425 were registered in the first quarter, 378 in the second, 563 in the third, and 458 in the fourth.

Simple Cholera.—Eighty deaths were referred to this disease, of which 45 were registered in the third quarter.

One man died from hydrophobia.

II.—CONSTITUTIONAL DISEASES.

The deaths from this class of diseases amount to 16,553—8,009 males and 8,544 females—being 16·9 per cent. of the deaths from all causes, and equal to 312 in every 100,000 of the population. This mortality, though over that for the previous year, is under the average for the ten years 1865-74.

Phthisis or Pulmonary Consumption.—To this disease, which, with the exception of bronchitis, is by far the most fatal in Ireland, there were 10,240 deaths referred last year—4,903 males and 5,337 females.

These deaths are equal to 192·86 in every 100,000 persons, against an average of 185·26 for the previous ten years.

The three eastern divisions, as has always been the case, yield the highest rates, that for the North-Eastern being 273·61 in every 100,000 persons living, for the Eastern 245·94, and for the South-Eastern 184·34. Taking the average results for the previous ten years, the highest rate was 259·62 in the Eastern Division; the next, 248·73, in the North-Eastern, and the third, 183·71, in the South-Eastern. It will be seen that the mortality in the North-Eastern Division last year was considerably over the average. In the union of Belfast, in which nearly one-third of the deaths from phthisis in that division occurred, the mortality reached the high rate of 4 in every 1,000 persons.

TABLE X.—Showing, by DIVISIONS, the Number of Deaths from Phthisis or Pulmonary Consumption registered in Ireland during the Ten Years 1865-74; the Average Annual Number for that period; and the Average Annual Rate per 100,000 of the Estimated Population; with the number registered in 1875, and the Rate represented thereby.

The Registrar of Belfast, No. 9 District, reporting on the deaths in his district during the last quarter of the year, when, of 28 deaths registered, 10 resulted from phthisis, states that "Among mill-workers preventable causes of this disease—improperly selected and badly prepared food, unsuitable clothing which does not protect from weather, crowded sleeping apartments, and intemperate habits—are occasioning terrible results."*

As usual, the lowest divisional rate was in the Western Division, but the mortality here, although comparatively light, was over the average for this division—the respective rates per 100,000 persons being, for last year 110·51, and for the average of the preceding ten years 95·64.

The four provinces rank in the following order:—Ulster, Leinster, Munster, Connaught; the rates varying from 230 in every 100,000 persons in Ulster to 119 in Connaught.

Of the total deaths from phthisis, 6,953, or 68 per cent., were amongst persons aged between 15 and 45 years.

There were registered in the first quarter 2,823 deaths; in the second, 2,934; in the third, 2,205; and in the fourth, 2,278.

Other Constitutional Diseases.—There were 1,159 deaths from mesenteric disease, 1,076 from hydrocephalus or water on the brain, and 875 from scrofula. Deaths from the first-named disease are equally divided between the sexes, while those from hydrocephalus and scrofula are about 25 per cent. more numerous amongst males than amongst females. This agrees with the results for previous years. The deaths from constitutional diseases of the diathetic order include 1,753 (779 males and 974 females) from cancer, which is about the average number; 1,254 (551 males and 703 females) vaguely returned as from dropsy; 165 from mortification; and 14 (10 men and 4 women) from gout.

III.—LOCAL DISEASES.

This class comprises inflammations and diseases of the functional organs, and the deaths included under it generally amount to one-third of the total mortality from all causes. Last year the number was 33,032 (17,742 males and 15,290 females), distributed as follows:—

Diseases of the Nervous System.—The deaths from this order of diseases number 8,362, in the proportion of 4 males to 3 females. They include 1,554 from paralysis, 1,042 from apoplexy, 599 from cephalitis, 333 from epilepsy, 197 from insanity, 2 (females) from chorea or St. Vitus's dance, 3,772 (almost exclusively children) which were attributed to convulsions, and 863 that have been tabulated under the head of "brain disease, &c.," including 229 from softening of the brain, and 145 from spinal marrow disease.

Diseases of the Organs of Circulation.—Compared with earlier years of the previous decade, these diseases show a large increase; e.g., in the year 1865 the number registered was 2,922, and in 1866 it was 3,168; while for last year, with a diminished population, the number is 4,096—2,125 males and 1,971 females. It is more than probable that a large portion of this increase is, in reality, only nominal, and is owing to a more precise diagnosis of the cause of death. Of the deaths from this order of diseases last year 3,922 (2,012 males and 1,910 females) were from "heart disease," 76 from pericarditis, and 98 from aneurism.

* See Quarterly Returns for 1875, page 169.

*Diseases of the Respiratory Organs.**—The deaths from these diseases, which are more numerous than in any of the preceding ten years, amount to 14,568 (7,524 males and 7,044 females), being equal to 274 in every 100,000 of the population. The average for the ten years 1865–74 was 12,743, or 234 in every 100,000 of the estimated mean population.

The divisional rates range from 166 in every 100,000 persons in the Western Division to 406 in the Eastern.

TABLE XI.—Showing, by DIVISIONS, the Number of Deaths from Diseases of the Respiratory Organs* registered in Ireland during the Ten Years 1865–74; the Average Annual Number for that period, and the Average Annual Rate per 100,000 of the Estimated Population; with the number registered in 1875, and the Rate represented thereby.

Inhabitants,										

Deaths from diseases of the respiratory organs were most numerous in the first quarter of the year, during which 5,502 were registered; the number for the second quarter was 3,700; for the third, 2,054; and for the fourth, 3,312.

Of the 14,568 deaths from these affections, as many as 10,736 (5,251 males and 5,485 females), resulted from bronchitis; 2,138 (1,360 males and 778 females), were from pneumonia or inflammation of the lungs; 503 from asthma; 275 from pleurisy; 124 from laryngitis and 792 have been tabulated under the head of “lung disease, &c.”

Diseases of the Digestive Organs.—Deaths from the various forms of disease embraced in this order, number 4,233—2,235 males, and 1,998 females. Amongst these may be noticed 552 (292 males and 260 females) from enteritis or inflammation of the bowels, 297 from peritonitis or inflammation of the covering of the bowels, 298 from inflammation of the stomach, 337 from ileus or obstruction of the bowels, 122 from hernia, 178 from ulceration of the intestines; 8 (5 males and 3 females) from fistula, 789 from stomach disease unspecified, 235 (150 males and 85 females) from inflammation of the liver, 164 from jaundice, 945 from liver disease unspecified, 16 from spleen disease, and 4 (3 males and 1 female) from disease of the pancreas.

* Exclusive of Phthisis or Pulmonary Consumption, for which see “Constitutional Diseases.”

Diseases of the Urinary Organs.—There were 1,273 deaths (973 males and 300 females) referred to these diseases, which are now more fatal than they were some years since, the number of deaths, for instance, in 1865, the first year of the preceding decade, being only 1,002. Of the deaths last year, 312 (220 males and 92 females) were from nephria or Bright's disease, 112 from diabetes, 82 from inflammation of the kidneys, 75 from cystitis or inflammation of the bladder, 28 from ischuria or suppression of the secretion of urine, 16 from stone in the bladder, and 648 from "kidney disease, &c.," of which 174 were from prostatic disease.

Diseases of the Organs of Generation.—But few deaths result from the diseases included under this head; last year the number was 128—3 males, each of whom died from hydrocele, and 125 females, of whom 66 died from ovarian dropsy, and 59 from diseases of the uterus.

Diseases of the Organs of Locomotion were fatal in 172 cases, and *Diseases of the Integumentary System* in 200, of which 11 were ascribed to phlegmon, 95 (61 males and 34 females) to ulcer, and 94 to various skin diseases.

IV.—DEVELOPMENTAL DISEASES.

This class comprehends diseases incidental to the formation, the reproduction, and the decay of the body; the deaths included under it in the returns for last year amount to 27,340—12,212 males and 15,128 females. Of these, 492 were from congenital malformation and developmental diseases of children, comprising 196 deaths which followed premature birth, 7 from cyanosis, 12 from spina bifida, 12 from other malformations, and 265 of children who succumbed during teething.

In the second order of developmental diseases there were 15 deaths from paramenia, and 563 from the accidents of childbirth, the latter being 65 under the average for the previous ten years. It has been seen, however, that the deaths specifically referred to puerperal fever last year are much over the average; and taking the deaths included under both headings, the total, 1,005, not only exceeds the average annual number of deaths of parturient women, but is more remarkable when read with the comparatively low birth-rate for last year, the mortality being equal to 1 death of a mother for every 138 births registered.

The remaining deaths in this class are—4,892 from atrophy, and debility, and as many as 21,378 (9,446 males, and 11,932 females) tabulated as from old age.

V.—VIOLENT DEATHS.

The difference between the number of deaths of this nature last year and the average for the 10 years 1865--74 is scarcely appreciable, the former amounting to 2,107 (1,464 males and 643 females), or 39·68 in 100,000 persons, and the latter to 2,129, or 39·17 in every 100,000 of the estimated mean population.

The deaths last year were distributed as follows:—Accident or negligence, 1,928 (including 709 from fractures and contusions, 491 from burns or scalds, and 445 from drowning), murder or manslaughter 76, suicide 75, execution 3, and violent deaths which, owing to the vagueness of the returns, could not be classed, 25.

TABLE XII.—Showing, by DIVISIONS, the Number of Deaths in Ireland caused by Violence (including Accidental, Homicidal, and Suicidal Deaths,) registered during the Ten Years 1865-74; the Average Annual Number for that period, and the Average Rate per 100,000 of the Estimated Population; with the number registered in 1875, and the Rate represented thereby.

Inquests.—There were 2,707 inquests reported to the Registrars during the year, being 1 inquest to every 36 deaths registered.

There were 247 cases of sudden death in which the cause was not ascertained.

In 1865 there was 1 death in every 19 registered which could not be classed, owing to the cause of death having been either ill defined or unspecified; the registration has so far improved that last year the number of such deaths only equalled 1 in every 38 of the total. It is true there is still much room for improvement, but I anticipate that the adoption of the new form of "Medical Certificate of the Cause of Death" approved by your Grace in Council, in the month of April last by which some well-founded objections of the medical profession are removed, will materially tend not only to the attainment of the desired result in this respect, but also to the securing of a more precise record of the causes of death in general.

AGES.

The mortality amongst children was about the average, and that of persons of advanced years considerably greater than usual. The causes of the increase in the latter have been already sufficiently indicated.

Deaths of infants under 1 year old numbered 13,128, being equal to 9·5 per cent. of the number of births registered.

Amongst children under 5 years of age 23,368 deaths occurred—a mortality equal to 36·5 in every 1,000 of the living at that age. Of these, 12,489 were boys and 10,879 girls; the former number representing 38·5 in every 1,000 boys, and the latter 34·4 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 10 per cent. of the persons living at that age.

Amongst the deaths registered are 807 of persons stated to have been aged 95 years and upwards—350 males and 457 females.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several seaports, the number of emigrants who left Ireland during the year 1875 amounted to 51,462; of these, 26,097 were males and 25,365 females. Of the whole number, 7,770 were from Leinster; 18,311 from Munster; 20,226 from Ulster; and 5,130 from Connaught: 25 persons did not state the county or province to which they belonged.

Of the emigrants in 1875, 17·4 per cent. were under 15 years of age; 67·1 per cent. were between 15 and 35 years old; and 15·5 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The changes during the year in the Dublin prices of the principal necessaries of life were, on the whole, in favour of the consumer. The average price of Messrs. Manders and Co.'s 4-lb. loaf was 7*d.*, against 8*d.* in the year 1874; oatmeal averaged 17*s.* 1*d.* per cwt., being 1*s.* 7*d.* under the mean price for 1874. The average prices of potatoes ranged from 2*s.* 11*d.* to 4*s.* 7*d.* per cwt., against 3*s.* 10*d.* to 5*s.* 7*d.* in 1874; and those of beef from 57*s.* to 79*s.* per cwt., against 54*s.* 6*d.* to 79*s.*

TABLE XIII.—AVERAGE PRICES IN DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1865–75, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1875.

YEAR.	Average PRICES OF PROVISIONS.						PAUPERISM.

1874,	8	18 8	3 10 " 5 7	54 6 " 79 0	47,699	30,232		
1875,	7	17 1	2 11 " 4 7	57 0 " 79 0	45,809	30,241		
1st Quarter, 1875,	7	16 4	2 8 " 4 4	55 0 " 80 0	51,444	32,349		
2nd " " "	7	17 6	3 3 " 5 2	57 6 " 81 6	46,094	31,272		
3rd " " "	7	17 11	2 10 " 4 5	58 6 " 79 6	41,342	28,467		
4th " " "	7	16 6.	3 1 " 4 5	57 6 " 75 0	44,357	28,877		

Surveying the period covered by the several Tables in this Report, *i.e.*, last year and the ten years preceding, it is found that beef was lowest in the year 1868, when the average prices ranged from 51s. to 65s. per cwt., and that the lowest prices for the other commodities named are those for the year 1865, when the average price of the 4lb. loaf was 6d., that of oatmeal 14s. per cwt., and the average range of potatoes from 2s. 11d. to 3s. 6d. per cwt. The highest average price of bread was 8½d. in 1867 and 1868, of oatmeal, 18s. 8d. in 1874; the highest range for potatoes, 4s. 6d. to 8s. per cwt. in 1873, and for beef, 64s. to 82s. 6d. per cwt. also in 1873.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates on Saturdays during the year 1875 was 45,809, being 1,890 under the average for the preceding year; and that the average number of persons receiving out-door relief was 30,241, or 9 over the corresponding number for 1874.

THE WEATHER.

The following particulars have been extracted from Returns of Meteorological Observations taken at the Ordnance Survey Office, Phoenix Park, Dublin, during the years 1865-75, furnished by Colonel Wilkinson, R.E., by direction of the Superintendent of the Ordnance Survey.

The mean height of the barometer at 9.30 A.M. during the year 1875 was 29.964 inches, against an average of 29.933 inches for the preceding ten years. The highest reading during the year (30.634) was on the 31st March, at 9.30 P.M., air calm, and the lowest (28.773 inches) was on the 24th January, at 3.30 P.M., wind W.

The mean temperature for the year was 49.6°; the highest registered was 77.9° on the 14th May, and the lowest 15.5° on the 5th December. The average mean temperature for the years 1865-74 was 49.5°.

1875, . . .	29.964	57.8	41.3	49.6	.820	207	32.825	11	34	50	24	21	83	77	35	30

Rain or snow fell on 207 days during the year, against an average of 191 days for the preceding ten years, the amount being 32·825 inches, or 5·679 inches over the average annual rain-fall for the ten years 1865–74.

The prevailing wind was the S.W., it having blown from that point on 83 days, at 9.30 A.M., with an average pressure of 3·52 lbs. per square foot. The wind blew from W. on 77 days; from E. on 50 days; from N.W. on 35 days; from N.E. on 34 days; from S.E. on 24 days; from S. on 21 days; from N. on 11 days, and the air was calm on 30 days, at 9.30 A.M. It will be noticed that easterly winds were more frequent than usual, the number of days on which it blew from one of the three points N.E., E., and S.E. at 9.30 A.M. being 108, against an average of 77 in the ten years 1865–74. The strongest winds, S.W., were on the 24th January and 26th September, the pressure being 25 lbs. per square foot.

In the course of the foregoing observations, in which I desired to bring under the more immediate notice of your Grace some of the principal facts contained in the accompanying Abstracts, I have adverted to certain deficiencies in registration.

With regard to Roman Catholic Marriages, the registration of which, in some parts of the country, is, I fear, not at all perfect, the remedy rests, to a great extent, with the clergymen who celebrate the marriages.

In the case of Births, many instances having been reported to this department in which births have not come to the knowledge of the Registrars until after the expiration of six months from the date of birth, and consequently too late for registration, I consider that an extension of the time for registration, would, under all the circumstances, be advisable. With this change, and the aid to be derived from the effective working of the Compulsory Vaccination Act, the registration of births should approach very near to absolute completeness. Referring to the Vaccination Act, I would suggest that section 3 of that Act be so far altered that *all* certificates of vaccinations should be sent, not to the Registrar of the district in which the vaccination has been performed, but to the Registrar of *the district in which the birth occurred*, so that in case the birth has not been registered, the proper officer may have cognizance of the omission.

The registration of Deaths will not become perfect until, at least, a notification of the death to the Registrar be required before interment. The gradual enclosing of the burial grounds throughout the country renders the enforcement of such a provision much more feasible than it would have been some years since.

I have the honour to be

Your Grace's faithful servant,

W. M. BURKE,

Registrar-General.

GENERAL REGISTER OFFICE,

CHARLEMONT HOUSE,

Dublin, 25th November, 1876.

Topographical Description of the Eight Divisions into which Ireland has been divided for Statistical purposes

No. I., THE NORTH-EASTERN DIVISION.—This division may be described by a line passing southward from Lough Foyle through the counties of Londonderry, Tyrone, and Armagh, to Lough Bawn, in the county of Monaghan, and thence eastward to Carlingford Lough; the north and east being on the seaboard.

No. II., THE NORTH-WESTERN DIVISION, is bounded on the east by the division just described, from Lough Foyle to a point a little south of Six Mile Cross, in the county of Tyrone, and may be described by a line drawn thence S.W. through the county of Fermanagh to the south of Enniskillen, embracing that portion of the north-west angle of the county of Cavan belonging to the Enniskillen Union, into the county of Leitrim, crossing Lough Allen, thence into the county of Sligo, to a point situated to the southward of the town of Ballymote, and thence extending north to Ballysadare Bay; the remainder of the division is bounded by the sea. It contains Loughs Erne and Derg, and part of Lough Allen, and large portions of it are mountainous.

No. III., THE EASTERN DIVISION, is situated in the provinces of Leinster and Ulster; it extends along the Irish Sea and St. George's Channel, from Warrenpoint, in the county of Down, to the south of Cahore Point, in the county of Wexford, stretching inland about twenty-five miles, and embracing the counties of Louth, Dublin, and Wicklow, and portions of the counties of Carlow, Cavan, Kildare, Meath, and Wexford; together with small portions of the counties of Armagh and Monaghan.

No. IV., THE NORTH MIDLAND DIVISION, is situated in the provinces of Leinster, Ulster, and Connaught, and extends southward from its junction with the "North-Western" division near Six Mile Cross, in the county of Tyrone, to Tyrrellspass, in the county of Westmeath. Virginia, in the county of Cavan, is situated on its eastern border, and Tulsk, in the county of Roscommon, on its western.

No. V., THE SOUTH MIDLAND DIVISION, situated in the provinces of Leinster and Munster, extends from the Hill of Down, in the county of Meath, southward to Borris, in the county of Carlow. Its southern boundary may be described by a line drawn thence to New Birmingham, in the county of Tipperary, and from that point south to Fethard, in the same county, thence westward to the northern base of the Galty mountains, and in a north-westerly direction, to Pallasgreen, in the county of Limerick. On the east it is bounded by the "Eastern" division, and on the west by the "Western" and the "South-Western" divisions.

No. VI., THE WESTERN DIVISION.—This division extends southwards from Sligo and Killala Bays to the northern bank of the River Shannon, lying westward of Limerick; the extreme points, north and south, being Benwee Head, in the county of Mayo, and Loop Head, in the county of Clare, a distance in or about 120 miles, which, however, does not represent the extent of seaboard, the western coast being indented by numerous bays and inlets. This division has been extended much more inland than the eastern division, as from its exposure to the Atlantic Ocean, and the prevalence of westerly winds (which blow for nearly three-fourths of the year), the climate must be affected for a considerable distance inland; the Unions situated on the extreme east are Boyle, Castlereagh, Glennamaddy, Mountbellew, Ballinasloe, and Portumna.

No. VII., THE SOUTH-EASTERN DIVISION.—This division extends from its junction with the "Eastern" division, southward of Cahore Point, in the county of Wexford, along the eastern and southern coasts to the east of Cork Harbour, and is bounded on the north by the "South Midland" division. It embraces the county of Waterford, nearly the whole of the county of Wexford, parts of the counties of Carlow, Kilkenny, and Tipperary; that portion of the county of Limerick (38,550 acres) comprised in the Mitchelstown Union, and a portion of the eastern side of Cork county.

No. VIII., THE SOUTH-WESTERN DIVISION, extends along the southern and western coasts from Cork Harbour to the River Shannon, and embraces the county of Kerry, nearly the whole of the counties of Cork and Limerick, and a small portion of the county of Clare, comprised in the Limerick Union.

POPULATION OF IRELAND (including Army, Navy, and Merchant Seamen on shore and in port)
estimated to the middle of each of the Years 1801 to 1875, inclusive:—

Middle of the Years	Estimated POPULATION.			Middle of the Years	Estimated POPULATION.			Middle of the Years	Estimated POPULATION.

NOTE.—This table has been constructed for the years 1801 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841, according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-5—By assuming the annual excess of births over deaths to equal 1 per cent. of the population, and deducting the number of emigrants according to the returns obtained by the Registrar-General.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, AND DEATHS.

1875.

ABSTRACT OF MARRIAGES.—Marriages registered in Ireland, pursuant to the

NOTE.—The Registrars' Districts are sub-divisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter W denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births in the Registrar's District, instead of exceeding the deaths, were, in fact, less than the deaths, to the extent stated.

* Waterfoot District was formed on the 15th of November, 1875, by the severance of a portion of the Electoral Division of Ardcline from Glenarm District. The numbers given above for Glenarm District include the Births and Deaths registered in the entire District up to that date.

† Formerly called Newtownlimavady.

IRELAND.—SUPPLEMENTARY TABLE of the

[In the Tables of Causes of Deaths, pp. 102-109, all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 116 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a few persons, or diseases which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous that the additional numbers would not interfere with the calculated proportions. Where it is desired,

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "Abstract of Marriages" to the Superintendent Registrar's District, numbered 75 (see page 38), and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number against each Registrar's District in the Third Column refers to the page in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]
