## SHEAMAS DE BÚRCA, AIRE UM RIALTAS ÁITIÚIL.

I have the honour to submit my Annual Report on the Marriages, Births and Deaths registered in Saorstát Éireann during the year 1922.

The number of marriages was 15,141 representing 4.79 per 1,000 of the estimated population which rate is 0.18 below the average for the ten years preceding, but 0.10 above the rate for 1921.

The births amounted to 58,849, being equivalent to a rate of 18.62 per 1,000, the latter being 2.11 below the average for the ten years 1912-21, and 0.32 below the rate for 1921.

The deaths from all causes numbered 44,547, the rate represented thereby being 14.10 per 1,000 of the estimated population, this rate being 1.98 below the average for the ten years, 1912-21, but 0.28 above the record low rate for 1921.

Tuberculous disease accounted for 4,614 deaths, affording a rate of 1.46 per 1,000 of the estimated population, which mortality is 0.49 below the average for the ten years preceding and 0.04 below that for 1921.

Deaths from cancer registered in Saorstát Éireann in 1922 numbered 2,523, or 0.798 per 1,000 of the population, showing a decrease of 87 in number as compared with the average for the ten years 1912-21, and a decrease of 86 in comparison with the latter year. The mortality rate for 1922 is lower than that for any year of the preceding decennium.

Influenza caused 1,812 deaths during the year under review, representing a rate of 0.57 per 1,000 of the population; this rate is, with the exception of the rate for each of the years 1918 and 1919, higher than that for any year of the preceding decade, the mortality for 1921 being only 0.20 per 1,000 of the population.

The mortality from bronchitis and pneumonia was also comparatively high—3,345 of the former and 2,792 of the latter—the rates per 1,000 of the population represented thereby being 1.06 and 0.88 respectively, the corresponding rates for 1921 being 0.94 and 0.72 per 1,000 of the population.

Deaths by violence (accidental, homicidal, and suicidal) numbered 1,431, being equivalent to 0.45 per 1,000 of the population estimated to the middle of the year, or 0.03 above the average for the ten years preceding, but 0.21 below the rate for the year 1921.

TABLE I.—Showing for each of the years 1912-22 the estimated Population\* of SAORSTAT ÉIREANN area; the number of Marriages, Births and Deaths registered, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1912-1921; also particulars relating to Northern Ireland for the year 1922.

## MARRIAGES.

During the year 1922 the marriages registered in Saorstát Éireann numbered 15,141, being equivalent to a rate of 4.79 per 1,000 of the estimated population; this rate is 0.10 above that for the previous year, but 0.18 under the average for the ten years, 1912-21.

Of the 15,141 marriages 13,915 were of Roman Catholics, as compared with 13,700 in 1921; the remaining marriages numbering 1,226 in 1922, as against 1,402 in 1921. Included in the 1,226 marriages are 856 celebrated according to the rites and ceremonies of the Church of Ireland, as against 970 in 1921; 154 as compared with 180 in 1921, were in Presbyterian Meeting-houses; 78 as against 88 in 1921 in "Registered Buildings" belonging to various religious denominations; 127 by civil contract in the Registrars' offices, as against 155 in 1921; and 11 as compared with 9 in 1921, were according to the Jewish rites.

The rate per 1,000 of the estimated Roman Catholic population represented by the number of marriages of Roman Catholics was 4.92, or 0.10 below the corresponding average rate for the preceding ten years, and the rate for other marriages was equivalent to 3.73 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0.80 below the corresponding average rate for the ten years, 1912-21.

TABLE II.—MARRIAGES registered in Sáorstát Éireann area in 1922, and in each of the previous ten years, according to the MODES OF CELEBRATION; with the rate per 1,000 of the population represented thereby.

1921 ... ..	970	180	88	155	—	9	1,402	13,700	15,102	4.17	4.75	4.69
Yearly Average 1912-1921.	1,063	199	85	131	2	9	1,489	14,218	15,707	4.53	5.02	4.97
1922 ... ..	856	154	78	127	—	11	1,226	13,915	15,141	3.73	4.92	4.79

It will be found from the figures given in the Abstract of Marriages, pages 8-9 that 90.0 per cent of the total marriages were those of bachelors and spinsters; that 5.6 per cent. were those of widowers and spinsters; that 3.1 per cent. were marriages of bachelors and widows; and that those of widowers and widows formed 1.3 per cent. of the total marriages. Thus, of the men married 6.9 per cent. were widowers, and of the women 4.4 per cent. were widows; so that in 10 instances in every 100 marriages, one or both of the contracting parties had been in the married state before.

A rough test of the progress of elementary education in Saorstát Éireann is afforded by the signatures of the contracting parties in the marriage registers or certificates. In the year 1922 there were 14,740 or 97.3 per cent. of the husbands, and 14,884, or 98.3 per cent., of the wives, who wrote their names, and the remainder signed by "mark," as against 14,871, or 94.0 per cent. of the husbands, and 15,241 or 96.4 per cent of the wives in the year 1912.

TABLE III.—Showing by Quarterly Periods the number of Marriages, Births, and Deaths registered in Saorstát Éireann area during each of the eleven years 1912-22, and the average number for the ten years 1912-21, with the rates per 1,000 of the population represented thereby.

### BIRTHS.

The births registered in Saorstát Éireann during the year 1922 numbered 58,849—30,345 boys and 28,504 girls—the ratio per 1,000 of the estimated population being 18·6, or 2·1 per 1,000 below the average rate for the ten years, 1912-21.

The birth rate for England and Wales per 1,000 of the population during the year 1922 was 20·6 and for Scotland 23·5.

Measured in terms of the total population, the birth rates for Ireland have been appreciably less than those recorded for the neighbouring countries, the explanation being that the number of marriages in Ireland in proportion to the population has been much less than in Great Britain. The Census Reports of 1911 (the date of the latest enumeration of the population of Ireland) show that of the total number of females aged 15 and under 45 years, in the population of England and Wales, 47·7 per cent. were married women, and in Scotland the proportion was 42·6 per cent., while in Ireland only 34·4 per cent. of the total number of females at these ages were married women.

Based on the number of married women 15 to 45 years of age and the average number of legitimate births for the three years, 1910-12 (the year of the latest Census for Ireland being the middle year) the legitimate birth rate for Ireland was 292·7 per 1,000 married women at these ages, as compared with 197·1 for England and Wales and 233·2 for Scotland.

For the same period, the average rate for legitimate births per 1,000 married women aged 15-45 in Saorstát Éireann was 305·4.

The proportion of male infants born alive in 1922 was 1,065 to every 1,000 females; in 1921 it was 1,056; in 1920 it was 1,067 to 1,000; in 1919 it was 1,069 to 1,000, in 1918 it was 1,040 to 1,000; and in 1917 the proportion was 1,051 males to 1,000 females.

Of the 58,849 births registered during the year, 57,329 or 97·4 per cent. were legitimate, and 1,520 or 2·6 per cent. were illegitimate, the proportions being the same as those for the preceding year.

The male children born in wedlock in 1922, numbered 29,530, and the female 27,799 or 1,062 of the former to every 1,000 of the latter; of the illegitimate children 814 were males, and 706 females, or 1,151 boys to 1,000 girls.

Of the children born in Leinster, 3·3 per cent. were illegitimate; in Munster the percentage was 2·7; in Ulster (part of) 2·3; and in Connaught, 0·9; the corresponding percentages for the preceding year being:—for Leinster, 3·3; for Munster, 2·7; Ulster (part of), 2·0; and for Connaught, 1·2.

The illegitimacy rate for Saorstát Éireann in 1922, viz., 2·6 per cent. of the total births, is slightly higher than the average (2·5) for the five preceding years, the rate for the province of Leinster during this quinquennial period being 3·2; for Munster, 2·7; for Ulster (part of), 1·9; and for Connaught, 0·8.

It may be stated that the proportion of illegitimate births in Saorstát Éireann is less than that recorded for most other countries.

In the provinces the rates represented by the total births registered during the year 1922 were as follows:—Leinster, 21·3 per 1,000 of the population in 1911; Munster, 17·6; Connaught, 16·4; and Ulster (part of), 17·5.

The total number of births registered in the first quarter of the year was 14,899; in the second, 15,692; in the third, 14,456; and in the fourth, 13,802.

Of the total births 52·0 per cent. were registered in the first six months of the year (181 days), and 48·0 per cent. in the second six months of the the year (184 days.)

#### MULTIPLE BIRTHS.

There were 725 twin births and 5 triplet births registered in Saorstát Éireann during the year 1922. The twin births were 1·23 per cent. of the total births, 1·26 per cent. of the single births, and 1·25 per cent. of the total mothers.

### DEATHS.

During the year the number of deaths registered in Saorstát Éireann was 44,547 affording a rate of 14·1 per 1,000 of the population, estimated to the middle of 1922. Of the deaths 22,748 were of males and 21,799 of females, equivalent to 14·3 and 13·9 per 1,000 of the male and female population, respectively.

The death-rate from all causes is 0.3 per 1,000 above that for the year 1921, but 2.0 below the average death-rate for the 10 years, 1912-1921.

For the province of Leinster the death-rate was 15.9 per 1,000; for Munster, 13.6; for Connaught, 11.9; and for Ulster (part of) 13.9.

Of the total deaths, 13,676 were registered in the first quarter, 12,517 in the second, 8,713 in the third, and 9,641 in the fourth.

Of the deaths for the year under review, 58.8 per cent. were recorded during the first six months, and 41.2 per cent. in the remaining six months.

The annual rates represented by the deaths registered in each quarter are as follows:—17.3 per 1,000 of the population for the first quarter; 15.8 for the second; 11.0 for the third; and 12.2 for the fourth. The rate for the first quarter is 1.9 below, for the second 1.1 below, for the third 2.0 below, and for the fourth 3.0 below the average rate for the corresponding quarters in the ten years, 1912-1921.

*It will be observed from the table on page 32 that 3,321 of the 44,547 deaths registered during the year took place in Infirmaries and General and Special Hospitals: 1,083 in Public Lunatic Asylums: 5,870 in Workhouses and Workhouse Hospitals: and 34,273 occurred "At their Own Homes," etc.*

Of the total deaths registered in Saorstát Éireann 7.5 per cent. occurred in "Infirmaries and General and Special Hospitals," the percentages for the four provinces varying from 1.5 in Ulster (part of) to 13.1 in Leinster. Deaths which took place in the Workhouse or Workhouse Hospitals constituted 13.2 per cent. of the total deaths, the respective percentages of these deaths for the provinces being:—Leinster, 13.0; Munster, 17.7; Connaught, 9.2; and Ulster (part of) 6.3.

#### CAUSES OF DEATH.

In the table which follows, the number of deaths from some of the principal diseases are shown for the years 1921 and 1922, also the averages for the ten years, 1912-1921.

CAUSES.	Number of Deaths registered			CAUSES.	Number of Deaths registered.		
	Years.		Average 10 years 1912-21		Years.		Average 10 years 1912-21
	1922.	1921.			1922.	1921.	
Enteric Fever	96	140	182	Cancer ... ..	2,523	2,609	2,610

Influenza ...	1,812	648	2,026	Diseases ... ..	139	123	136
Cerebro-spinal	11	23	30	Accidents of Pregnancy			
Fever ...				and Childbirth ...	194	179	201
Tuberculous	4,614	4,824	6,156				
Disease							

It will be observed from this table that deaths from tuberculosis fell from 4,824 in 1921 to 4,614 in 1922; deaths caused by cancer from 2,609 to 2,523; deaths from diarrhœa and enteritis of children under 2 years fell from 891 in 1921 to 443 in 1922; deaths from diphtheria from 461 to 401; deaths from whooping-cough from 216 to 201; deaths from enteric fever from 140 to 96; deaths from scarlet fever from 110 to 73; deaths from dysentery from 27 to 9; and deaths from cerebro-spinal fever from 23 to 11.

Conversely, the number of deaths from bronchitis rose from 3,013 in 1921 to 3,345 in 1922; deaths from pneumonia from 2,303 to 2,792; death from influenza from 648 in 1921 to 1,812 in 1922; deaths from measles from 141 to 458; deaths from puerperal septic diseases from 123 to 139; deaths from other diseases or accidents of pregnancy or childbirth from 179 to 194; and deaths from typhus rose slightly from 17 in 1921 to 18 in 1922.

TABLE IV.—Showing the number of Deaths from All Causes, from some of the Principal during each of the eleven years, 1912-1922, with the average Annual Number Population represented by the number of deaths from these causes, and the Northern Ireland for the year 1922.

NOTE—The Classification of Causes of Death adopted for 1921-2 is in accordance with the International as far as possible, in order to afford comparison with those for 1921-2. The numbers in brackets

YEAR. \*Per cent. of total deaths.

ENTERIC FEVER.—The deaths from this cause, numbering 96 (of males 56 and of females 40) are 86 under the average (182) for the preceding ten years and 44 below the low number recorded for the year 1921.

TYPHUS.—Deaths from typhus during the year under review caused only 17 deaths, as against an average of 30 for the ten years preceding.

SMALL-POX.—No case of this disease was reported during the year.

MEASLES.—Deaths from measles which numbered 141 in 1921 rose to 458 in 1922 or 94 above the average (364) for the ten years 1912-21. Of the 458 deaths 242 were those of males and 216 of females and 376, or more than 82 per cent. of the total deaths from measles, were those of children under 5 years of age.

Of the 458 deaths, 298 (or 65 per cent.) occurred in the following superintendent registrars' districts:—Dublin, 212; Cork, 55; Waterford 17; and Wexford 14.

SCARLET FEVER.—A low mortality from scarlet fever characterised the year 1922, there being only 73 deaths, as compared with 110 in 1921 and an average of 140 for the decennium, 1912-21. Twenty-two of the 73 deaths were registered in Dublin superintendent registrar's district and 8 in Croom.

WHOOPIING-COUGH.—Deaths from this cause, which fell from 795 (the highest mortality for any one year during the decennial period, 1912-21) in the year 1920 to 216 (the lowest mortality for this decennium) in 1921, further fell to 201 during the year under review. Of the latter 84 were deaths of males and 117 of females, and they comprise those of 181 children under 5 years of age and 20 aged 5 and under 10 years.

DIPHTHERIA.—The fatal cases of this disease during the year 1920 amounted to 378 followed by 461 in 1921 and by 401 (equivalent to a rate of 0.13 per 1,000 of the estimated population) in 1922. The latter number which is 60 under that for 1921 is, however, 156 (or 64 per cent.) above the average (245) for the ten years, 1912-21.

Of the 401 deaths 200 were those of males and 201 of females and they include 198 deaths of children under 5 years of age (or more than 49 per cent. of the total number of deaths from this cause) and 115 between 5 and 10 years of age. Thus children under 10 years of age accounted for 313 deaths, or about 78 per cent., of the total mortality from diphtheria at all ages.

About half the deaths registered occurred in the following superintendent registrars' districts:—Cork (69), Dublin (47), Limerick (28), Middleton (17), Swinford (14), Croom (12), and Scarriff (12.)

DYSENTRY.—There were only 9 deaths from dysentery throughout Saorstát Éireann, being 11 under the average (20) for the ten years preceding.

DIARRHOEAL DISEASES.—The number of deaths ascribed to diarrhoea and enteritis at all ages during the year 1922 was 680, including the deaths of 443 children under 2 years of age. This number comprising 272 males and 171 females, is much lower than that for any of the preceding ten years, 448 below that for 1921, and 321 under the average (764) for the ten years, 1912-21.

INFLUENZA.—Deaths attributed to influenza numbered 1,812, and of these 712 were returned as with pulmonary complications and 1,100 without pulmonary complications. Deaths of males from this cause numbered 914 and of females 898. Of the former, 398, or 44 per cent., were ascribed to influenza with pulmonary complications, and of the latter 314, or 35 per cent., were assigned to this condition.

Deaths of persons 65 years of age and upwards amounted to 621, or 34 per cent. of the total deaths from influenza, deaths of children under 5 years of age numbering 220, or about 12 per cent. of the total.

With the exception of the years 1918 and 1919 during which 6,788 and 7,468 deaths were registered in Saorstát Éireann, the number of deaths in 1922 is much higher than the number recorded in any year of the decade ending with the year 1921, but, owing to the high mortality, referred to, for the years 1918 and 1919, the deaths from influenza recorded for 1922, viz., 1,812, are 214 under the average (2,026) for the preceding ten years. As compared, however, with the average (751) for the eight years, 1912-1917 and 1920-1921, the number for 1922 shows an increase of 1,061 deaths.

Of the 1,812 deaths, 206 were registered in the superintendent registrar's district of Dublin, 88 in Limerick, 80 in Cork, 50 in Cavan, 41 in Kilmallock, 33 each in Rathdown and Waterford, 27 each in Monaghan and Tralee, 25 each in Fermoy and Inishowen, 24 in Manorhamilton, 21 deaths each in Bantry, Nenagh and Mohill, and 20 each in Thurles and Glenties. Only one superintendent registrar's district (Killadysert) escaped mortality from this disease throughout Saorstát Éireann during the year 1922.

ERYSIPELAS.—The fatal cases of erysipelas numbered 54 (of males 24 and of females 30) .

ACUTE POLIOMYELITIS.—To this disease 11 deaths were attributed (2 of males and 9 of females), 8 being deaths of children under 5 years of age.

ENCEPHALITIS LETHARGICA.—Nineteen deaths from this cause were registered in Saorstát Éireann during the year 1922, and of these 12 were deaths of males and 7 of females. The nineteen deaths were 12 under the number (31) recorded for 1921.

CEREBRO-SPINAL FEVER.—The number of deaths (11) recorded during the year under review is 12 under the number (23) for 1921, and 19 under the average (30) for the ten years 1912-21.

OTHER EPIDEMIC DISEASES.—There were 7 deaths from varicella—2 of males and 5 of females—and one death of a male from rubella.

TETANUS.—The fatal cases of tetanus numbered 22, deaths of males being 14 and of females 8.

### TUBERCULOSIS.

The number of deaths from all forms of tuberculous disease registered in Saorstát Éireann during the year 1922 was 4,614 (representing 1.46 per 1,000 of the estimated population), as compared with 4,824 in 1921 and an average of 6,156 for ten years 1912-21. The highest yearly mortality during this decennial period in connection with the Saorstát Éireann area was recorded for the year 1915, during which 6,725 deaths from this cause were registered. Hence the deaths from tuberculous disease in 1922 are 31 per cent. under those for 1915 and 25 per cent. under the average for the ten years 1912-21, the mean annual rate for which period is 1.95 per 1,000 of the population, the rate for all Ireland for the same period being 2.03 per 1,000.

The death rate for tuberculous disease in England and Wales during the year 1922 was 1.12 and in Scotland 1.19 per 1,000 of the population.

The 4,614 deaths for Saorstát Éireann include 3,694 from tuberculosis of the respiratory system, 234 from tuberculosis of the meninges, 261 from tuberculosis of the intestines and peritoneum, 83 from tuberculosis of the vertebral column, 70 from tuberculosis of the joints, 83 from tuberculosis of other organs, and 189 from disseminated tuberculosis.

Of these 4,614 deaths, 2,316 were those of males (equivalent to 1.45 per 1,000 of the male population) and 2,298 were those of females affording a rate of 1.47 per 1,000 of the estimated number of females in the population.

The following table shows this information in comparison with that for each of the ten years preceding, also annual increases or decreases :—

[TABLE

TABLE V.—Showing by sexes the mortality from tuberculosis during each of the years 1912-22.

\* Decrease in 1921 as compared with 1912.

As may be seen from the following table 2,081 deaths from tuberculous disease were registered in the province of Leinster, equivalent to 1.79 per 1,000 of the population; 1,462 in Munster, affording a rate of 1.41 per 1,000; 705 in Connaught, or 1.15 per 1,000; and 366, or 1.11 per 1,000 in the portion of Ulster comprising the counties of Cavan, Donegal and Monaghan.

In comparison with the year 1921, a decrease of 152 is shown for Leinster, 7 for Munster, 17 for Connaught, and 34 for Ulster (part of).

TABLE VI.—Showing, by counties and provinces, the mortality represented by the number of deaths registered from all forms of tuberculous disease during the year 1922; with the increase or decrease in the latter year as compared with 1921.

Details regarding the ages and sexes of the persons whose deaths were registered as from the various forms of tuberculous disease during the year 1922 are given in the abstracts, commencing on page 16, also the deaths from this disease by provinces, counties, and superintendent registrars' districts. See also Table IV.

**SYPHILIS.**—Deaths attributed to Syphilis numbered 29, the deaths of males being 18 and of females 11. Twenty-one of the 29 deaths were those of infants under one year of age.

Three deaths (males) were ascribed to other venereal affections.

Deaths from general paralysis of the insane numbered 41 (of males 36 and of females 5), from locomotor ataxy, 27 (of males 21 and of females 6), and from aneurism 19, the males being 12 and the females 7.

**PURULENT INFECTIVE SEPTICÆMIA.**—Deaths so classified amounted to 103—of males 62, and of females 41.

**OTHER INFECTIOUS DISEASES.**—Among these were 2 deaths from anthrax and one from mycosis.

**CANCER.**—The number of deaths from cancer (including those returned as from carcinoma, sarcoma, cancer, malignant disease, registered in Saorstát Éireann during the year 1922 was 2,523, being equal to a rate of 0·80 per 1,000 of the estimated population.

Of the 2,523 deaths, 1,330 were of males, representing a rate of 0·83 per 1,000 of the estimated male population, and 1,193 were deaths of females, equivalent to a rate of 0·76 per 1,000 of the estimated number of females in the population.

The number of deaths from cancer recorded for 1922 was 86 less than the number for 1921, viz., 2,609, and 87 less than the average (2,610) for the decennium 1912-21, and, with the exception of the mortality (2,510 deaths) in 1912, it was lower than that for any year of this decennial period.

The rate in 1922 for Saorstát Éireann (0·80 per 1,000) is 0·03 under the average (0·83 per 1,000) for the ten years 1912-21. During this latter period the average rate for all Ireland was 0·87 per 1,000 of the population.

**TUMOURS.**—This title included only tumours either definitely stated to have been non-malignant, or as to which further information was not obtainable as the result of special inquiries regarding their nature.

There were 29 from cerebral tumour (of males 11, and of females 18); from tumours of the ovary, 14; from tumours of the uterus, 18; and 48 tumours of other or unstated sites (17 of males and 31 of females). The latter include 12 returned as from tumour of abdomen, 6 of intestine, 5 of mediastinum, 5 of bladder, and 2 deaths each from tumour of neck, spine, kidney and liver.

**RHEUMATISM.**—To rheumatic fever 100 deaths were assigned, 48 being those of males and 52 of females; and to chronic rheumatism, osteo-arthritis and gout 248 deaths, including those of 101 males and 147 females.

**DIABETES.**—Deaths from this malady numbered 239 (of males 128 and of females 111) and are 24 above those registered in 1921, but 3 under the average (242) for the ten years 1912-21.

**ALCOHOLISM.**—To this group 21 deaths (16 of males and 5 of females) were attributed.

The deaths of 98 persons (72 males and 26 females) were ascribed to cirrhosis of the liver.

**OTHER GENERAL DISEASES.**—Thirty deaths were assigned to rickets, 161 to pernicious anaemia, 55 to other anaemias, and chlorosis, 22 to exophthalmic goitre, 14 to other diseases of the thyroid gland, 17 to diseases of the adrenals, 12 to leukaemia, 22 to lymphadenoma (Hodgkin's disease) and 4 to chronic poisoning by mineral substances.

\*Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

**MENINGITIS AND ENCEPHALITIS.**—The fatal cases of meningitis (not returned as cerebro-spinal) during the year 1922 numbered 310, and of these 168 were deaths of males and 142 of females.

Deaths from encephalitis (not returned as encephalitis lethargica) numbered 35, those of males being 23, and of females 12.

**CEREBRAL HÆMORRHAGE.**—To this heading 1,303 deaths were assigned, including 584 deaths of males and 649 of females returned as from cerebral hæmorrhage or apoplexy, and 29 deaths of males and 41 of females from cerebral thrombosis or embolism.

The 1,303 deaths are 40 above the number (1,263) recorded for 1921, but 101 under the average (1,404) for the ten years 1912-21.

**EPILEPSY.**—The deaths of 148 persons (79 males and 69 females) were ascribed to epilepsy.

**CONVULSIONS.**—Deaths attributed to convulsions amounted to 622 (of males 353 and of females, 269). Of the 622 deaths, 515 or 82·8 per cent. were those of infants under one year of age, or 12·7 per cent. of the deaths from all causes of infants under one year of age.

**HEART DISEASE.**—There were 4,609 deaths (2,184 of males and 2,425 of females) from diseases of the heart, equivalent to 1·46 per 1,000 of the estimated population, or 10·3 per cent of the total number of deaths from all causes. They comprise 13 deaths (of males 5 and of females 8) from pericarditis, 55 (of males 30 and of females 25) from acute endocarditis and myocarditis, 55 (of males 40 and of females 15) from angina pectoris and 4,486 (of males 2,109 and of females 2,377) from other diseases of the heart.

**ARTERIAL SCLEROSIS.**—Deaths assigned to this cause numbered 147, including those of 100 males and 47 females. This number is 5 under that recorded for 1921, viz., 152.

**BRONCHITIS.**—The fatal cases of bronchitis numbered 3,345 (of males 1,605 and of females 1,740) being equal to 1·06 per 1,000 of the estimated population, or 7·5 per cent. of the total number of deaths registered in Saorstát Éireann during the year 1922. Of the 3,345 deaths, 397 were returned as from acute bronchitis, 657 as from chronic, and 2,291 as from bronchitis not defined as acute or chronic.

As compared with the number of deaths (3,013) recorded in 1921, the mortality for the year under review shows an increase of 332, but a decrease of 821 is observable when this mortality is compared with the average for the decennium, 1912-21, viz., 4,166.

**PNEUMONIA.**—Deaths from this cause numbered during the year, 2,792, affording a rate of 0·88 per 1,000 of the estimated population. These deaths, comprising 1,591 of males and 1,201 of females, include 1,146 returned as from broncho-pneumonia, 286 as from lobar pneumonia and 1,360 from pneumonia, not otherwise defined.

As in the case of bronchitis, the mortality from pneumonia in 1922 is above that for 1921, but under the average for the ten years ending with 1921, the number for the latter year being 2,303 and the average, 2,815.

**PLEURISY, EMPYEMA.**—The number of deaths classed to pleurisy, including deaths from empyema regarding which the originating cause other than pleurisy could not be ascertained was 95, the deaths of males numbering 56 and of females 39.

As the result of inquiries into the causes of 18 deaths registered in Saorstát Éireann during the year 1922 as from empyema, 10 were assigned to pneumonia (2 to lobar pneumonia, 2 to broncho-pneumonia, and 6 to pneumonia, not otherwise defined), 4 to tuberculous disease, 3 to influenza, and one to injury.

**APPENDICITIS AND TYPHILITIS.**—Deaths under this heading numbered 147, those of males being 81, and of females, 66, as compared with a total of 139 for 1921, and an average of 133 for the ten years 1912-21.

**CIRRHOSIS OF THE LIVER.**—There were 98 deaths from this cause, including 72 of males and 26 of females. The number recorded for 1922 was less than that for any of the preceding ten years, was 20 below the mortality (118) for 1921 and 73 below the average for the ten years, 1912-21.

**ACUTE AND CHRONIC NEPHRITIS.**—The deaths of 175 persons (94 males and 81 females) were assigned to acute nephritis and 821 (males 476 and females 345) to chronic nephritis, the deaths from acute and chronic nephritis combined amounting to 996—a number which is 28 under that for 1921, viz., 1,024, and 147 under the average (1,143) for the ten years, 1912-21.

### PREGNANCY AND CHILDBIRTH.

The mortality of women during pregnancy and childbirth is classified under three headings, namely, (1) septic conditions, (2) intrinsic accidents of pregnancy and childbirth and (3) disease or cause associated with pregnancy and childbirth. To the first group 139 deaths were attributed in the year 1922, to the second 194, and to the third 37; altogether the deaths in Saorstát Éireann of childbearing women numbered 370. This number, which is 34 above that for the year 1921, represents a rate of 6.29 per 1,000 of the total births registered as compared with 5.51 in the year 1921, and with 5.75 per 1,000, the average rate for the decade, 1912-21.

Table IX shows that the mortality from puerperal septic diseases rose from 123 in 1921 to 139 in the year 1922 and from accidents of pregnancy and childbirth from 179 in 1921 to 194 in 1922. The deaths of women from causes associated with pregnancy and childbirth which were 34 in the year 1921 rose to 37 in the year under review.

TABLE VIII.—Showing the number of deaths of women in pregnancy in 1922 definitely returned as either caused by or associated with pregnancy or childbearing.\*

Saorstát

VIOLENCE.

Deaths caused by violence, as registered in Saorstát Éireann during the year 1922, amounted to 1,431, a number equivalent to 0.45 per 1,000 of the estimated population, which number is 679 less than that recorded for 1921, but 104 above the average (1,327) for the ten years 1912-21. With the exception of the mortality from violence in the years 1916 and 1921, that for 1922 is higher than the mortality for any year of the decennial period referred to.

Of the 1,431 deaths 65 were classed to suicide, 470 to homicide, 4 to execution, leaving 892 to other deaths by violence, the majority of which were definitely stated to be accidental.

The suicidal cases comprise the deaths of 58 males and 7 females.

Of the 470 homicidal cases, 437 were deaths of males (including 3 infants under one year old) and 33 of females (including 6 infants under one year old). In 419 instances, the deaths referred to homicide were caused by firearms, and include the deaths of 180 soldiers.

The deaths, other than those classed to homicide, suicide or execution, include 9 (8 of males and one of a female) caused by poisons or poisonous gases, 185 (81 of males and 104 of females) by burns or scalds (not including one death of a male caused in a conflagration). Of the 185 deaths caused by burns or scalds, 78 were those of children under 5 years of age.

There were 123 deaths (of males 97 and of females 26) from accidental drowning, 160 deaths caused by injuries due to firearms, of which 139 were those of males and 21 of females; and there were 76 deaths due to injuries caused by vehicles, including 44 by motor driven vehicles.

Of the 9 deaths assigned to poisons or poisonous gases, one death was attributed to each of the following:—food, alcohol, methylated spirit, ptomaine, opium, chloroform, strychnine, sulphuric acid, and narcotic poisoning.

Of 6 suicidal deaths by poisoning, 2 were stated to have been caused by lysol, one each by opium, strychnine, and sulphuric acid, and in one instance the name of the poison was not stated.

#### ILL-DEFINED CAUSES OF DEATH.

To ill-defined causes 1,599 deaths (of males 788 and of females 811) were attributed, or 3·6 per cent. of the total deaths registered.

#### UNCERTIFIED CAUSES.

Among the 44,547 deaths registered, 11,750 were not certified by medical practitioners, constituting 26·4 per cent. of the total mortality, as compared with 27·2 per cent. in 1921 and an average of 26·5 for the ten years, 1912-21. Of the deaths returned as uncertified 1,086 were deaths of infants under one year of age and 8,319 were those of persons aged 65 years or upwards.

#### INQUESTS.

From returns furnished by the registrars it would appear that the number of inquests during the year 1922 was 876, or one inquest for every 51 deaths registered.

#### AGES AT DEATH.

Of the total number of deaths at all ages 6,537, or 14·7 per cent. were deaths of children under 5 years of age, including 3,652 deaths of males, or 16·0 per cent. of the male mortality at all ages, and 2,885 deaths of females, or 13·2 per cent. of the total number of deaths of females.

The deaths of 19,680 persons aged 65 years or upwards were registered during the year 1922, constituting 44·2 per cent. of the total number of deaths at all ages, and include 9,574 of males, or 42·1 per cent. of the total deaths of males, and 10,106 of females, or 46·4 per cent. of the deaths of females at all ages.

Among the deaths of persons at these ages 16,187, or 36·3 per cent. of the total deaths, were 70 years of age or over.

Deaths of persons aged 95 years or upwards numbered 307 (of males 154 and of females 153) and they include 58 (males 27 and females 31) whose ages at death were returned as 100 years or upwards.

The ages in detail of the persons whose deaths were registered in the year 1922 are given in the Abstracts commencing with page 12.

#### INFANT MORTALITY.

Deaths of infants under one year of age registered in Saorstát Éireann during the year 1922 numbered 4,054, being equivalent to 69 per 1,000 births or 13 per 1,000 under the average (82) for the ten years 1912-21, and 4 per 1,000 under the rate (73) for 1921. During these ten years, the average rate for the whole of Ireland was 87 per 1,000 births registered.

The male infants whose deaths were registered in Saorstát Éireann in 1922 numbered 2,353, or 78 per 1,000 births of males and the female infants 1,701, or 60 per 1,000 births of females. The male and female infant mortality rates for 1921 were 78 and 66 respectively.

In 1922 and 1921 the rates for deaths of infants under one year in England and Wales were 77 and 83 per 1,000 births, respectively, the corresponding rates for Scotland being 101 and 90 per 1,000 births.

The following table gives particulars regarding Saorstát Éireann, "Twelve Town Districts," (Registrars' Districts containing towns with a population of 10,000 or upwards), and the remainder of Saorstát Éireann, with corresponding figures for 1921, with reference to infant mortality :—

3-6 " ...	21.72	22.61	20.77	9.82	10.02	9.60	13.18	13.60	12.74
6-12 " ...	25.73	26.55	24.85	11.62	12.39	10.82	15.60	16.41	14.76
Under one year ...	109.12	118.11	99.52	58.25	62.74	53.54	72.61	78.45	66.45

As will be observed from the foregoing table the infant mortality rate for the "Twelve Town Districts" in 1922 was 100.33 per 1,000 births registered, as against 109.12 in 1921, showing a reduction in mortality of 8.79 per 1,000 or 8.1 per cent., in the former year as compared with the latter, while in the remainder of Saorstát Éireann, the rate which was 58.25 per 1,000 births in 1921 fell to 55.53 in 1922, a reduction of of 2.72 per 1,000 or 4.7 per cent.

The great disparity between the infant mortality for the "Twelve Town Districts" and that for the remainder of the area will be noticed—100.33 for the former and 55.53 for the latter. This is especially the case as regards the mortality of infants between 6 and 12 months old, the rate for the "Twelve Town Districts" in 1922 being 28.05 per 1,000 births as against 11.33 for the remainder of Saorstát Éireann.

The mortality rate for infants 3 to 6 months old for the "Town Districts" was 19.21 per 1,000, as compared with 9.20 for the remainder of the area, and for infants under one month old 34.55 per 1,000 as compared with 23.29.

It may be stated here that if the infant mortality rate for the "Town Districts" were the same as the rate (55.53) for the remainder of Saorstát Éireann during the year 1922 a saving of 786 lives would have resulted, a number equivalent to 45 per cent. of the deaths (1,760) of infants under one year of age registered in the "Twelve Town Districts."

As regards the relative frequency of the deaths of infants registered in the "Twelve Town Districts," it will be found that 35 per cent. of the mortality occurred among infants under one month old, 10 per cent. at age one to 2 months, 8 per cent. at age 2 to 3 months, 19 per cent. at ages 3 to 6 months and 28 per cent. at ages 6 to 12 months.

In the remainder of Saorstát Éireann, which includes all towns each under 10,000 inhabitants, 42 per cent. of the deaths of infants registered therein were under one month old ; 12 per cent. one and under two months ; 9 per cent. 2 to 3 months old ; 17 per cent., 3 to 6 months old, and 20 per cent. 6 and under 12 months old.

Table X. gives the infant mortality rates based on the births and deaths registered for each of the eleven years, 1912-22, by selected causes of death, and for the latter year by sexes and age periods.

Similar information, distinguishing sex, as regards the combined registrars' districts containing the towns of 10,000 inhabitants or upwards is afforded by Table XI.

From Table X. it will be seen that atrophy, debility, marasmus (18.15), convulsions (8.75), pneumonia (7.14), bronchitis (5.30) diarrhoea and enteritis (6.49) and premature birth (6.49), contribute 52.32 (or 76 per cent.) to the mortality from all causes during the year 1922., viz., 68.89 deaths of infants under one year old per 1,000 births registered. With the exception of that for pneumonia the rates for the above-named causes compare favourably with those for the past ten years.

The frequency of deaths from the causes above referred to in relation to the "Twelve Town Districts" follows closely the lines indicated as applicable to the entire area of Saorstát Éireann—atrophy, debility, marasmus (16.36), convulsions (12.37), pneumonia (15.16), bronchitis (7.70), diarrhoea and enteritis (12.54), and premature birth (12.09), accounting for 76.22, or 76 per cent. of the deaths of infants from all causes per 1,000 births registered in these districts, viz., 100.33.

According to the Yearly Summaries of the Weekly Returns furnished by the Registrars the infant mortality rates for the "Twelve Town Districts in 1922" (corrected for births and deaths in institutions by the exclusion of those belonging to other localities) with the increase or decrease as compared with the average rate per 1,000 births for the five years preceding, were as follows (the rates for 1922 are given in brackets) :—Drogheda (28), decrease, 67 ; Sligo (41), decrease 71 ; Clonmel (41), decrease 18 ; Tralee (48), decrease 10 ; Dundalk (70), decrease 13 ; Galway (72), decrease 13 ; Kilkenny (78), same as average ; Wexford (87), decrease 13 ; Cork (93), decrease 2 ; Waterford (94), decrease 8 ; Limerick (108), decrease 8 ; and Dublin Registration Area (116), decrease 27.

For Belfast the infant mortality rate for 1922 was 94 as compared with 126 for the five years 1917-21, the respective rates for Londonderry being 95 and 102 respectively.

The infant mortality rate for London during the year 1922 was 74 per 1,000 births, as compared with 80 in 1921 ; the rates for Liverpool were 94 and 105 respectively ; for Glasgow 120 and 106 ; and for Edinburgh the respective infant mortality rates were 91 and 96.

Table XII. affords a comparison of the rates per 1,000 births, represented by the number of deaths of infants under one year of age, as registered in each county and county borough in Saorstát Éireann.

TABLE X.—Showing for Saorstát Éireann area the Mortality, by certain causes, among infants under 12 months old, per 1,000 Births registered, in the eleven years 1912–1922, and by Sexes and Age-periods for the latter year.

THE WEATHER.

Reports on the weather throughout Saorstát Éireann during each quarter of the year 1922, as furnished by the Meteorological Office, London, are published in my quarterly Returns of Marriages, Births and Deaths for that year.

During the year 1922, the mean height of the barometer in the Phoenix Park was 29.921 inches, the mean temperature 47.6°, and the rainfall 21.73 inches.

Is mise, le meas mór,

WILLIAM J. THOMPSON,

Ard-Chláruidhe.

Oifig um Chlárú Ghenearála,  
Tigh Charlemont,  
Baile Átha Cliath,

17 adh lá, de Mhi na Samhna, 1923.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1922.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.\*

[Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.]

SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Popula- tion. 1911.	TOTAL.			BIRTHS.				DEATHS.		Excess of Births over Deaths.	
			MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.		Males.	Females.

									Total .. .. .	3,139,688	1,589,509	1,550,179

III.—Statement showing, by sexes, the Estimated Population of Saorstát Éireann, in the middle of each of the years 1911—22.

	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Persons .. .. .	3,135,000	3,135,000	3,131,000	3,132,000	3,120,000	3,132,000	3,142,000	3,155,000	3,203,000	3,216,000	3,222,000	3,160,000
Males .. .. .	1,587,000	1,588,000	1,585,000	1,587,000	1,570,000	1,579,000	1,587,000	1,595,000	1,645,000	1,651,000	1,658,000	1,594,000
Females .. .. .	1,548,000	1,547,000	1,546,000	1,545,000	1,550,000	1,553,000	1,555,000	1,560,000	1,558,000	1,565,000	1,564,000	1,566,000

Note.—This Statement (III.) has been constructed by adding the Births registered up to the middle of each year to the Population as ascertained at the Census of 1911, and deducting the number of Deaths registered and of emigrants enumerated. Some adjustments covering the years 1915-21 were made as regards the movements of British Military. The populations given in the above statements from 1841 to 1921 include the latter.

HOSPITALS; (2), in PUBLIC LUNATIC ASYLUMS; (3), in WORKHOUSES; and (4), at their OWN HOMES, &c.; the PROVINCES, COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS in 1921.—(continued.)

NOTE.—This Table has been constructed for the years 1847 to 1851—By taking the English average birth rate of one in 51, deducting the number of deaths and the number of emigrants in each year as given in the Irish Census Reports of 1851, an allowance proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.  
 1852 to 1871.—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861; and 1871, as explained for the last period.  
 1872 to 1914.—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, 1892-1901, and 1902-1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911, respectively, and the population as shown by the Census in each of these years.  
 1915 to 1921.—The estimated population for each of these years has been computed as in 1914 with some additional adjustments with regard to the movements of the military.
