REPORT ON VITAL STATISTICS FOR THE YEAR 1972

This Report has been prepared by the Central Statistics Office for the Minister for Health in accordance with the provisions of Section 2 of the Vital Statistics and Births, Deaths and Marriages Registration Act, 1952.

The statistics relate to the area in Ireland exclusive of Northern Ireland.

Births are classified according to the area of residence of the mother and deaths according to the area of residence of the deceased.

The number of births for each of the years 1943 to 1972 is exclusive of late registrations, and the number of deaths for each of the years 1940 to 1967 is exclusive of non-residents. From 1968 however the number of deaths includes non-residents.

The important statistics contained in this Report have already been published, and the Report consists mainly of a breakdown and analysis of these statistics.

NOTE: Prior to 1970 births and deaths were classified according to year of registration. In order to comply with United Nations regulation it was decided to classify births and deaths by year of occurrence from 1970 onwards.

Because of this change in the basis of classification, those births and deaths which occurred in 1969 but were registered in 1970 have been recorded neither in the 1969 nor in the 1970 Report on Vital Statistics. The number of births excluded on this account was 2,545 and the number of deaths, 2,279. Appendix tables to the 1971 Report show these births classified by age of mother at maternity and number of previous children, while deaths are classified by cause, sex and age group.

GENERAL SUMMARY

Marriages.—There were 22,302 marriages registered during the year 1972 compared with 22,014 in 1971. The marriage rate per 1,000 population was 7.40 compared with 7.39 in 1971.

Births.—The number of births occurring during 1972 was 68,527 and the birth rate was 22.74 per 1,000 population, compared with 22.68 per 1,000 population in 1971. The number of illegitimate births registered in 1972 was 2,005 or 2.93 per cent of all births.

Deaths.--The number of deaths occurring during 1972 was 34,381 and the death rate was 11.41 per 1,000 population. In 1971 deaths numbered 31,890 and the rate was 10.71.

Of the deaths occurring in 1972, 32.54 per cent were stated to be due to ischaemic and other forms of heart disease, 16.76 per cent to malignant neoplasms, 13.69 per cent to cerebrovascular disease and 0.53 per cent to tuberculosis (all forms).

The number of deaths in 1972 from tuberculosis of all forms was 183 and the rate was 0.06 per 1,000 population, thus remaining at the same level as in 1971.

There were 5,547 deaths from malignant neoplasms and neoplasms of lymphatic and haematopoietic tissues (excluding Hodgkin's disease and leukaemia and aleukaemia). This total is comparable with that for "cancer" in the 1949 and earlier Reports. The rate in 1972 was 1.84 per 1,000 population, showing no change compared with 1971.

During 1972 the number of deaths occurring of infants under one year was 1,236 compared with 1,214 in 1971 giving rates of 18.04 and 17.97 respectively per 1,000 live births.

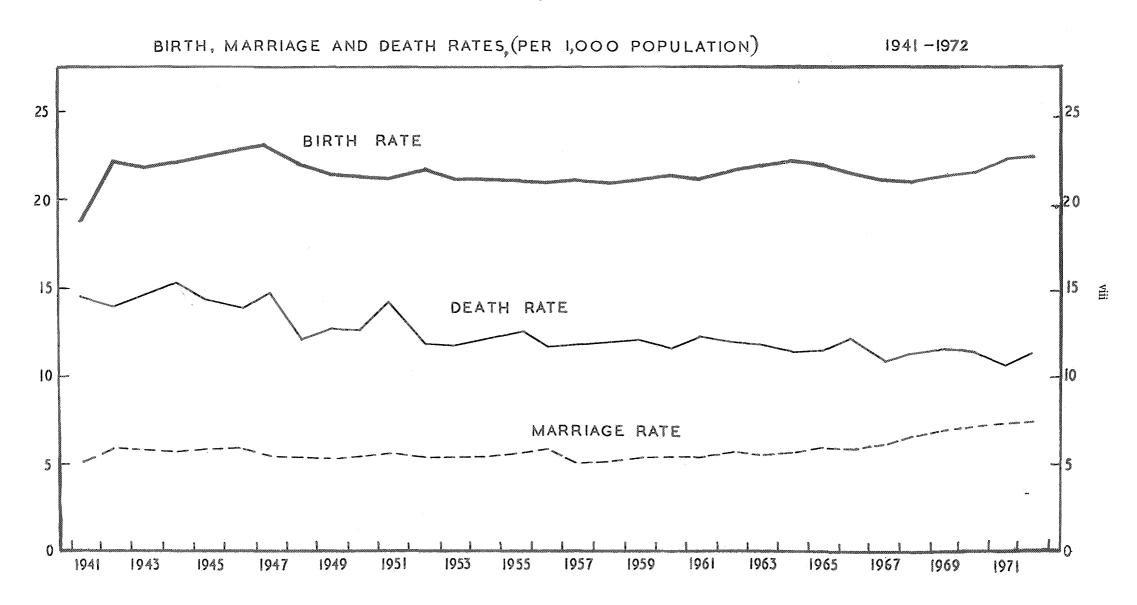

The total number of deaths from accidents and other external causes in 1972 was 1,680 of which road vehicle accidents accounted for 647.

Marriage, birth and death rates per 1,000 population for the years 1941 to 1972 are illustrated in Diagram 1.

Issue of Authority for Registration.—Births and deaths which have not been registered within one year of their occurrence can be registered only on the authority of An tArd Chlaraitheoir. The number of births registered on the authority of An tArd Chlaraitheoir in 1972 was 803 and the number of deaths registered was 193. Throughout the tables in this Report these births and deaths have been excluded.

Population. The estimated population in April 1972 was 3,014,000.

Diagram 1

MARRIAGES

The number of marriages registered in 1972 was 22,302, an increase of 288 on the previous year; the rate was 7.4 per 1,000 population, remaining at the same level as 1971, the highest rate ever recorded. TABLES 4 and 5 of this Report show the average numbers of marriages registered and marriage rates for ten-year periods since 1864 and by single years since 1971. The following table compares the marriage rate in Ireland in the years 1941 to 1972 with those in Northern Ireland, England and Wales and Scotland.

TABLE I

NUMBER OF MARRIAGES PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1941-1960

AND IN EACH YEAR 1963-1972

Year	Ireland*	Northern Ireland	England and Wales	Scotland
1941-1950†	5.6	7.6	8.6	8.5
1951-1960†	5.4	6.8	7.8	8.1
1963	5.5	7.0	7.5	7.6
1964	5.6	7.3	7.5	7.7
1965	5.9	7.1	7.8	7.8
1966	5.8	7.3	8.0	8.1
1967	6.1	7.3	8.0	8.1
1968	6.5	7.5	8.4	8.4
1969	7.0	7.7	8.1	8.3
1970	7.1	8.1	8.5	8.3
1971	7.4	7.9	8.3	8.1
1972	7.4	7.7	8.2	8.1

*Exclusive of Northern Ireland.

From this table it will be seen that over the period under review, while the marriage rate in this country has been consistently lower than the rates in the other areas, the difference has been decreasing due to the rate in this country rising faster than in the other areas.

AGE AT MARRIAGE

Particulars of the ages of persons marrying in this country were obtained at the 1946 Census of Population. At that Census persons were asked to state their date of marriage and a special analysis was made of 14,338 marriages which had taken place in the preceding twelve months and in the case of which the husband and wife were enumerated on the same census schedule. Corresponding data have been available since 1957 from marriage registrations and the results obtained since have made possible an examination of the trends in age at marriage over the intervening period, which are summarised in the following table.

TABLE II

PERCENTAGE DISTRIBUTION OF MARRIAGES ACCORDING TO AGE OF GROOM AND AGE OF BRIDE AND AVERAGE AGE AT MARRIAGE IN 1945-1946 AND IN EACH YEAR 1969 TO 1972

,	Dist	Distribution according to age of groom				Distribution according to age of bride

Average age	33.1	28.1	27.7	27.5	27.3	28.0	25.3	25.1	25.0	24.8

[†]Average annual number of marriages per 1,000 population for decennial periods from 1941-1960.

Whereas, in 1945-46, 59.0 per cent of the men who married were aged 30 years and over, the proportion over this age had fallen to 21.6 in 1972; the average age of men at marriage declining from 33.1 years in 1945-46 to 27.3 years in 1972. In 1945-46, 32.9 per cent of women marrying were aged 30 years and over compared with 12.3 per cent in 1972 while the average age at marriage declined from 28.0 years in 1945-46 to 24.8 in 1972. In TABLE 43 the marriages registered in 1972 are shown cross classified by age of groom and age of bride in single years while in TABLE 44 similar particulars are shown for marriages between bachelors and spinsters. From the latter table it may be calculated that the average ages of bachelors and spinsters marrying in 1972 were 27.0 and 24.5 respectively.

A comparison of first marriage rates per 1,000 single population in each age group in Ireland and in England and Wales in 1972 is made in Table III. The figures were obtained by dividing the number of single males marrying in each group by the total number of single males in that age group and similarly for females.

TABLE III
FIRST MARRIAGE RATES PER 1,000 SINGLE POPULATION IN EACH AGE GROUP IN IRELAND* AND ENGLAND
AND WALES 1972

	Bac	helors	Spinsters		
Age groups	Ireland* 1972	England and Wales 1972	Ireland* 1972	England and Wale 1972

45-49 "	12.6	18.9	9.6	20.6	
50-54 "	65	13.8	2.2	15.7	
55 and over	6.5 1.4	5.3	0.4	15.7 3.4	
Fotal, 15 years and over	47.0	81.6	58.3	97.5	

^{*}Exclusive of Northern Ireland.

†16-19 years for England and Wales.

For each sex the marriage rates in Ireland were considerably below those in England and Wales in the younger age groups. In the 15-19 age groups the marriage rate in England and Wales was almost four times that in Ireland in the case of both males and females. In the 20-24 age group the England and Wales rate for males was almost double the Irish rate and for females was more than one and a half times the Irish rate. There was very little difference between the rates in the age groups between 30-49 for males and between 25-44 for females. In the age groups above 50 the rate for England and Wales were significantly higher than the Irish rates.

MODE OF CELEBRATION

The number of marriages celebrated in accordance with the rites and ceremonies of the Catholic Church registered in 1972 amounted to 21,413 (equal to 96 per cent of the total) and other marriages numbered 889, of which 528 were according to the rites and ceremonies of the Church of Ireland, 130 in Presbyterian Churches, 43 in Methodist Churches, 7 according to Jewish Rites, 13 in registered buildings belonging to other religious denominations and 168 by civil contract in Registrar's Office.

The rate for Catholic marriages in 1972 was 7.48 per 1,000 of the Catholic population, a decrease of 0.07 on the corresponding rate for 1971. The rate for all other marriages combined was 5.90 per 1,000 of the population other than Catholic, an increase of 0.99 on the 1971 rate.

TABLE IV

MARRIAGES REGISTERED IN THE YEARS 1941 TO 1960 AND IN EACH YEAR 1963-1972 ACCORDING TO THE MODE OF CELEBRATION, AND THE RATES PER 1,000 CORRESPONDING POPULATION FOR CATHOLIC AND ALL OTHER MARRIAGES.

† Average annual number of marriages and rates for decennial periods 1941-1960.

Marriages are classified according to form of ceremony, age of groom and age of bride in TABLES 45 and 46. For Catholic marriages the average age of the groom was 27.3 years compared with 29.0 years for other marriages (including Civil marriages). The average age of bride for Catholic marriages was 24.8 years and for other marriages, 25.6 years.

SOCIAL GROUP

A classification which has been widely used in recent years in census of population statistics is that by Social Group. This classification, when applied to a person at work, is determined by his or her occupation although status (i.e. whether the person is an employer, own account worker or employee) is also taken into account. The social group of a person not at work is considered to be that of the gainfully occupied person on whom he or she is dependent. The men and women married in 1972 were classified by social group on the basis of the information as to occupation given in the marriage register, and the results obtained are given in TABLES 47 to 49.

In TABLES 47 and 48 grooms and brides are classified by social group and age at marriage in each group. In the case of grooms and brides the average marriage age in 1972 was higher in the social group "Farmers, relatives assisting and farm managers" than in any other group. The lowest average age was in the group "Other manual workers" for both grooms and brides.

TABLE 49 shows marriages registered in 1972 cross-classified by the social groups of groom and bride. Of the women marrying men in the "Skilled manual workers" group, in the case of whom occupation was stated, 56 per cent were in the "Intermediate and other non-manual workers" group, 25 per cent were other manual workers and 10 per cent were in the lower professional group, there being smaller percentages in each of the other groups. The distribution by social group of women marrying men in each of the remaining social groups may be considered in the same way. The table may also be examined by considering the social groups of the men marrying the women in each particular social group. Thus it will be seeen that only 27 per cent of the women stated to be in the social group "Farmers, relatives assisting and farm managers" married men in social groups other than their own. A substantial number of women in the "Intermediate and other non-manual workers" groups married men in each of the other social groups. In the case of the majority of women in the "manual workers" groups the husbands belonged to the same groups.

AREA OF RESIDENCE

Four districts may be considered in relation to each marriage, namely that in which the marriage took place, the areas of residence of the bride and groom prior to marriage, and the intended future residence. In TABLE 42 figures for marriages according to place of occurrence are given for 1972. A comparison between the area of residence of the bride before the ceremony and the area in which the marriage took place is made in TABLE V.

In TABLES 50 and 51 marriages are shown classified by area of residence prior to marriage and age group of groom and bride. Confining attention to the marriages in the case of which the area of residence was within the State, it will be seen that the average age at marriage is lower in predominantly urban than in rural areas. Thus in the four county boroughs the average age of grooms was not over 27 years, whereas in the counties Roscommon, Longford, Cavan and Galway the average age was 29.8, 29.6, 29.2 and 29.1 respectively. The average age of brides was not over 25 years in the four county boroughs. The lowest average age was in Carlow, Limerick County Borough and Waterford Co. Borough being 23.9 and the highest ages were in Leitrim 26.2 and Galway and Longford 26.0.

In TABLE 52 marriages are cross-classified by area of residence before marriage of groom and bride. As is to be expected, in the great majority of cases the groom and bride were from the same or neighbouring counties. A feature of the table is the large number of cases in which the address of the groom or bride or both groom and bride was outside the State. Thus 929 of the men married in the State in 1972 were returned as residing in England, Wales or Scotland, 375 in Northern Ireland and 244 in other countries. The number of brides who were resident before marriage in England, Wales or Scotland was 540, the number from Northern Ireland was 186 and the number from other countries was 94. In 693 cases both the groom and bride were from outside the State. In the past it has been the practice to compute marriage rates for counties and county boroughs by relating the marriages registered in each area to the resident population of that area.

Course		5.0				
Cavan	7.2 8.0	5.9				
Donegal Monaghan	7.4	6.3				
Monaghan	1.4	5.8				
ULSTER (part of)	7.7	6.1				
TOTAL .	7.4	6.9				

It will be observed that rates (a) and (b) differ on account of the fact that marriages of men whose area of residence was outside the country were included in the calculation of rate (a) and excluded from rate (b). The main difference between rate (a) and (b) is in the much lower figures for the county boroughs. In the case of the question on intended future permanent residence, the accuracy of many of the entries was not as high as for the other information supplied. There were 630 marriages registered in which no information on future residence was provided. Nevertheless the answers to this question revealed that, in a high proportion of cases, the intended future residence was outside the State.

TABLE VII

PERCENTAGE OF MARRIAGES WITH FUTURE INTENDED RESIDENCE
OUTSIDE THE STATE 1963-1972

Year	Total Marriages	Marriages with intended future residence abroad	Col. (3) as percentage of col. (2)
(1)	(2)	(3)	(4)
1963	15,556	1,949	12.5
1964	16,128	1,995	12.4
1965	16,946	2,004	11.8
1966	16,849	2,272	13.5
1967	17,788	2,242	12.6
1968	18,993	2,293	12.1
1969	20,304	2,396	11.8
1970	20,778	2,224	10.7
1971	22,014	2,090	9.5
. 1972	22,302	1,986	8.9

As may be seen from Table VII the proportion of marriages with intended future residence outside the State shows a decline over the years 1963 to 1965 with a big increase in 1966. Since 1966 there has been a continuous decline and it is now below the 1965 level. In the case of 1,164 marriages the future residence was in England and Wales, 328 in Northern Ireland, 49 in Scotland, 99 in other parts of Europe, 170 in the United States of America, 55 in Canada, 71 in Australia and New Zealand and 50 elsewhere. The age distributions and average ages of the grooms and brides going to the various countries are shown in TABLES 53 and 54 respectively. It will be seen that the average age of the men and women marrying and then going abroad was somewhat above the level of that for all marriages in the State. The marriages of persons going abroad are shown classified by social groups of groom and bride in TABLES 55 and 56 respectively. By comparing TABLES 47 and 55 it is possible to examine the proportions of men marrying in each social group who intended to reside outside the country, and it is found that this proportion varied considerably between the different groups. Table VII contains the results obtained.

TABLE VIII

PERCENTAGE OF MEN MARRYING IN EACH SOCIAL GROUP WHOSE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE IN 1971 AND 1972.

Social group of groom	Percentage with intended future residence outside the State				
gooda group of groom	1971	1972			
	Per	cent			
Farmers, relatives assisting and farm managers	2	2			
Other agricultural occupations and fishermen	4	3			
Higher professionals	24	18			
Lower professionals	16	15			
Employers and managers	12	14			
Salaried employees	12	12			
Intermediate non-manual workers	8	9			
Other non-manual workers	9	7			
Skilled manual workers	11	10			
Other manual workers	7	6			
TOTAL, ALL GROUPS COMBINED	10	9			

A classification of marriages of persons going abroad, by form of marriage ceremony, is made in TABLE 57. With the aid of this Table it may be calculated that in 1972 in the case of Catholic marriages the percentage with intended future residence outside the State was 8 per cent compared with 9 per cent in 1971. The corresponding figure for all other marriages was 23 per cent in 1972 thus maintaining the same level as in 1971.

Finally, in TABLES 58 and 59 the marriages in the case of which the intended future residence was outside the State are shown classified by area of residence before marriage of groom and bride. The proportions which these marriages represent of the total when classified according to area of residence of groom are shown in Table IX.

TABLE IX

PERCENTAGE OF MARRIAGES IN 1971 AND 1972 IN THE CASE OF WHICH THE INTENDED FUTURE RESIDENCE WAS OUTSIDE THE STATE, ACCORDING TO AREA OF RESIDENCE OF GROOM BEFORE MARRIAGE.

Area of residence of groom before marriage	Percentage with intended future residence outside the State				
	1971	1972			
		Per cent			
Dublin County Borough and Dun Laoghaire	4	4			
Remainder of Leinster	3.	2			
Munster	3	2			
Connacht	5	4			
Ulster (part of)	7	5			
Outside the State	90	88			

BIRTHS

The number of births during the year 1972 was 68,527 comprised of 35,375 males and 33,152 females. The corresponding figures for 1971 were 67,551, 34,751, and 32,800 respectively. The birth rate in 1972 was 22.74 per 1,000 population compared with 22.68 in 1971.

TABLE X NUMBER OF BIRTHS IN IRELAND* AND BIRTH RATES PER 1,000 POPULATION IN IRELAND AND NEIGHBOURING COUNTRIES, 1941-1960 AND IN EACH YEAR 1963-1972

*Exclusive of Northern Ireland. †Average annual number of births and birth rates for decennial periods from 1941-1960.

CLASSIFICATION BY AGE AT MATERNITY, PARITY AND DURATION OF MARRIAGE

In TABLE 39 is shown the total number of births registered in 1972 classified by age of mother at maternity and number of previous liveborn children. The number of births in the case of which the mother's age was not stated was 309 or 0.5 per cent of the total. In 1971 the corresponding figures were 295 or 0.4 per cent with seven instances where parity was not stated. The results contained in TABLE 39 are summarised in Table XI.

TABLE XI BIRTHS OCCURRING IN 1972 CLASSIFIED BY AGE OF MOTHER AT MATERNITY AND NUMBER OF PREVIOUS CHILDREN.

		Number of previous children									
Age at maternity	Total	0	1	2	3	4	5 to 9	10 to 14	15 and over	Not stated	
Under 20 years	2,840	2,278	471	79	9	3		₹.		-	
20-24 years	16,388	8,887	4,795	1,731	652	235	87	1	-	-	
25-29 "	21,397	5,941	6,512	4,592	2,318	1,089	932	13	-	-	
30-34 "	14,622	1,798	2,587	3,280	2,812	1,768	2,255	120	2	-	
35-39. "	9,398	710	910	1,340	1,540	1,515	2,990	374	19	-	
40-44 "	3,306	170	189	282	351	424	1,502	344	44	-	
45 years and over	267	12	7	12	21	32	115	60	8	-	
Not stated	309	302	3	-	1	-	3.	,-	-	-	
TOTAL	68,527	20,098	15,474	11,316	7,704	5,066	7,884	912	73		

In preparing this table the procedure in the case of multiple births was to count each child as an individual birth. For instance if a fifth pregnancy produced twins the children would be classified as a fifth and sixth child in parity order. Continuing the trend observed since 1967 and 1968 there is in 1972 a shift towards the younger age groups in the distribution of births according to the age of mother at maternity. As may be calculated from Table XII, in 1972 mothers aged under 30 years at maternity accounted for 59.4 per cent of the births compared with 57.7 per cent in 1971, corresponding figures for England and Wales and Scotland for 1972 being 79.4 per cent and 78.1 per cent respectively, illustrating the striking difference between the countries.

TABLE XII

PERCENTAGE DISTRIBUTION OF BIRTHS ACCORDING TO AGE OF MOTHER AT MATERNITY IN IRELAND*
IN 1971 AND 1972 AND IN ENGLAND AND WALES AND SCOTLAND IN 1972.

	Ire	land*	England and Wales	Scotland	
Age at maternity	1971	1972	1972	1972

35-39 "	14.4	13.8	5.5	6.0	
40-44 "	5.3	4.8	1.4	1.6	
45 years and over	0.4	0.4	0.1	0.1	
TOTAL	100	100	100	100	
Average age at maternity	29.4	29.1	26.2	25.6	

^{*}Exclusive of Northern Ireland.

The difference between this country and England and Wales and Scotland shown in Table XII is due to the facts that (a) women in Ireland marry at a later age and (b) married women in Ireland have on the average more children, as may be seen from Table XV. When attention is confined to legitimate first births, in order to eliminate the effect of factor (b), the difference is now less pronounced than in previous years as may be seen from Table XIII.

TABLE XIII

^{*}Exclusive of Northern Ireland.

In each age group the number of legitimate births per 1,000 married women was considerably higher in Ireland than in England and Wales. In the 15-19 year group the Irish rate was 93 per cent above that in England and Wales, in the 20-24 year group 109 per cent greater, while the excess in the Irish rate rose steadily with increasing age. The number of illegitimate births per 1,000 single, widowed and divorced women was appreciably lower at all ages in Ireland than in England and Wales. On account of the much higher proportion of women married at the younger ages in England and Wales the fertility rates for all women combined were higher in England and Wales than in Ireland in the 15-19 year group, but at the later ages the Irish rate was considerably higher.

The total number of illegitimate births was 2,005 being 163 more than in 1971. This was equivalent to an annual rate of 6.8 per 1,000 unmarried females and was 2.9 per cent of total births. The number of illegitimate births has shown an increase every year since 1959 when the lowest ever number was recorded.

The percentage distribution of births according to the number of previous children in 1971 and 1972 is shown in Table XV and a comparison made with the corresponding distributions in England and Wales and Scotland in 1972.

TABLE XV

^{*}Exclusive of Northern Ireland.

The difference between the years 1972 and 1971 in respect of the percentage distribution according to number of previous children was slight. The percentage of women with large families was considerably higher in Ireland than in England and Wales or Scotland. In Ireland in 1972 12.9 per cent of the mothers had 5 or more previous children, the corresponding percentages being only 1.9 in England and Wales and 2.5 in Scotland. Since 1967, however, the percentage of mothers in Ireland with 5 or more previous children has been steadily declining.

MULTIPLE BIRTHS

The number of maternities in 1972 which resulted in multiple live births was 862 consisting of 854 sets of twins and 8 of triplets. This is equivalent to a "twinning rate" (number of live twins per 1,000 maternities which resulted in live births) of 12.6. Table XVI summarises the number of multiple births and the "twinning rate" for the years 1963-1972.

TABLE XVI

NUMBER OF MULTIPLE BIRTHS AND THE NUMBER OF TWINS PER 1,000 MATERNITIES, 1963-1972.

Year	Live Births	Maternities which resulted in live issue	Twins	Triplets	Quadruplets	Twinning rate
1963	63,246	62,264	960	11	-	15.4
1964	64,072	63,177	873	11	-	13.8
1965	63,525	62,648	850	12	1	13.6
1966	62,215	61,339	858	9	-	14.0
1967	61,307	60,457	836	7	-	13.8
1968	61,004	60,165	821	9	-	13.6
1969	62,912	62,033	849	15	-	13.7
1970	64,382	63,528	834	10	-	13.1
1971	67,551	66,688	839	12	-	12.6
1972	68,527	67,657	854	8	-	12.6

DEATHS

The number of deaths occurring during the year 1972 was 34,381 of which 18,731 were those of males and 15,650 those of females equivalent to a rate of 11.41 deaths per 1,000 total population, compared with 10.71 in the previous year, and 11.44 in 1970.

In Table 9 are shown the average annual death rates, by age group, for decennial periods from 1864 to 1970 and the death rates for each year 1971 and 1972.

While the crude death rate per 1,000 population has shown a gradual downward trend since the beginning of the century, striking falls occurred in the death rates at the younger ages.

Table XVII compares the death rates in the years 1941-1972 with those in Northern Ireland, England and Wales and Scotland. The death rate in this country in 1972 was slightly higher than in Northern Ireland and lower than that for England and Wales and Scotland. However, over the period covered in the table the decrease in this country has been greater than that in any of the other areas.

Attention should be drawn to the fact that these comparisons are based on crude death rates, which are to some extent affected by differences in the age-sex structures of the population in the different countries, while comparisons over a period of years are also affected by changes in the age-sex structures of the populations.

TABLE XVII

DEATH RATES PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1941-1960
AND IN EACH YEAR 1962-1972.

†Average annual number of deaths and death rates for decennial periods from 1941-1960.

COMPARISON BETWEEN COUNTIES

A difficulty arises when comparisons are made between the death rates in different regions of the country, due to the fact that the age distribution of the population varies considerably from one county to another. Thus, if a particular county contains a large proportion of elderly persons the crude death rate per 1,000 population will be relatively high even if the health conditions in that county are better than the general average. To overcome this difficulty standardised death rates are prepared. For a particular county this is done by calculating the death rate in each age group of the population in that county and then multiplying the death rate in each age group by the population in the whole country in that age group and summing the resulting products. This sum is then divided by the total population in the country at all ages to decide the standardised rate for the country.

In certain areas the standardised death rates differ appreciably from the crude rates, the extremes being in Dublin County (Remainder) which had a crude death rate of 5.38 and a standardised rate of 9.63, reflecting the very young age structure in Dublin County and in Leitrim where standardisation has the effect of lowering the death rate from 16.87 to 11.66, because of the comparatively old age structure in that county. The standardised rates in 1972 were lowest in Mayo and Dublin County and highest in the County Borough of Waterford.

CAUSES OF DEATH

The tables in this Report showing causes of death are based on the Eight Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death prepared by the World Health Organisation. The Eight Revision was used for the first time in classifying deaths by causes in the 1968 Report. The Reports from 1958 to 1967 were based on the Seventh Revision.

TABLE XIX

AVERAGE ANNUAL NUMBER OF DEATHS AND DEATH RATES FROM SOME OF THE PRINCIPAL CAUSES IN EACH PERIOD 1955-57, 1960-62, 1965-67, AND 1970-1972

	ALL CAUSES	1,206.2	1,194.0	1,149.7	1,117.7

In Table XIX the number of deaths in the various disease groups in the years prior to 1968 have been adjusted to conform to the structure of the groups under the 8th Revision of the International Classification of Diseases.

From Table XIX it can be seen that the major difference between the periods 1955-57 and the years 1970-1972 has been the drop in deaths from tuberculosis. The rate for 1970-1972 was one-quarter of the rate in 1955-57. In the case of other infective and parasitic diseases the rate dropped to almost one-half of the 1955-57 rate. There were also significant falls in death rates from influenza and senility; in the case of senility the drop can be attributed to a decrease in the number of uncertified deaths and better certification of cause of death. Heart diseases remained the single biggest cause of death, almost twice as many people dying from heart disease as from the next biggest cause of death, i.e. cancer, the rate for which showed an increase of 17 per cent.

				L	<u> </u>	<u> </u>	<u> </u>	<u> </u>			<u> </u>	<u> </u>

Of the deaths occurring in 1972,74 per cent were due to four main causes, i.e. ischaemic and other forms of heart disease, malignant neoplasms, cerebrovascular disease and respiratory diseases. Diseases of the heart were responsible for the highest rates, 395.9 per 100,000 population for males and 280.3 per 100,000 females. Most of these deaths occurred at ages over 55. Malignant neoplasms were the next major cause, the rates for which were 208.1 and 174.1 for males and females respectively per 100,000 population. The rates for cerebrovascular disease were 141.0 and 171.1 respectively for males and females per 100,000 population; as in the case of heart diseases the greater number of these deaths occurred at ages over 55. The deaths from respiratory diseases were due mainly to pneumonia and bronchitis. Between the ages 5 to 34 years accidents were the greatest single cause.

Some of the principal causes of deaths are considered in greater detail in the following sections.

TUBERCULOSIS

In 1972 there were 183 deaths from tuberculosis, of which 154 were caused by the respiratory form and 29 by other forms of the disease. As can be seen from Table XXI between the period 1941-1950 and the year 1972 death rates from tuberculosis fell to a fraction of their former level.

The mortality from tuberculosis in the counties and county boroughs in 1972 is compared in Table 12 of this Report. The highest death rates from all forms per 1,000 population were in Kerry (0.14), and Waterford County (0.13), while the lowest rate was in County Louth (0.01).

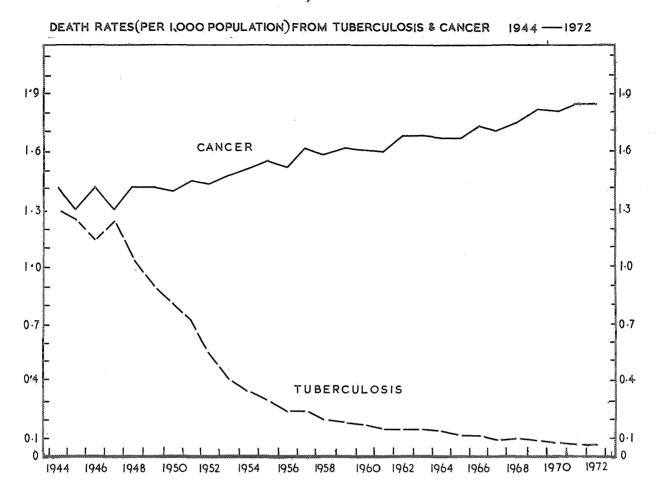

TABLE XXI

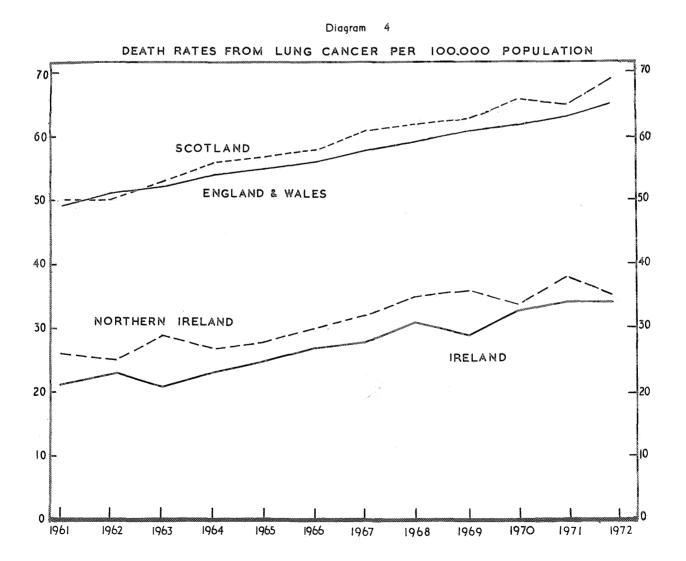

NUMBER OF DEATHS AND DEATH RATES PER 1,000 POPULATION FROM TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND FROM ALL OTHER FORMS OF TUBERCULOSIS, 1941-1960 AND IN EACH YEAR 1963-1972

^{*}Average annual number of deaths and death rates for decennial periods from 1941-1960.

Diagram 3

CANCER

Prior to 1950 under the Fifth Revision of the International List of causes of death, cancer deaths were those classified under 045-055. With the introduction of the Sixth Revision in 1950 the World Health Organisation recommended that total cancer deaths should be based upon Nos. 140-205 (Nos. 140-209 in Eight Revision) of the International Statistical classification which now included Hodgkins disease and leukaemia, but for comparability with the years prior to 1950 the total cancer figures less Hodgkins disease and leukaemia should also be shown.

In 1972 there were 5,762 deaths from cancer (Nos. 140 to 209). Of this number, 47 deaths were caused by Hodgkins disease and 168 by leukaemia and aleukaemia.

Table XXII shows the death rate from cancer in certain age groups in the years 1963 to 1972.

TABLE XXII

DEATHS FROM CANCER (Nos. 140-209) CLASSIFIED BY SEX AND AGE PER 100,000 POPULATION AT THE SAME AGES, 1963 TO 1972

				Age grou	ip (years)

1971	6	19	59	195	388	683	1,173	174
1972	6	• 20	67	190	373	702	1,168	174

In the years under review the death rates from cancer showed little difference between males and females in the age groups under 25 years but between the ages 25 and 54 years the female rates were generally greater than those for males. In 1972 the male death rate for all ages was 20 per cent above that for females. The trend in the death rates from cancer since 1943 is shown in Diagram 3 but it should be noted that for reasons given earlier the figures plotted in this diagram exclude deaths from Hodgkin's disease, leukaemia and aleukaemia.

TABLE XXIII

DEATHS FROM CANCER (Nos. 140-209) PER 1,000 POPULATION IN IRELAND* AND NEIGHBOURING COUNTRIES, 1963 TO 1972.

Year	Ireland*	Northern Ireland	England and Wales	Scotland
1963	1.73	1.63	2.18	2.25
1964	1.73	1.65	2.44	2.26
1965	1.73	1.71	2.23	2.29

1967	1.76	1.65	2.30	2.34
1968	1.82	1.84	2.32	2.40
1969	1.89	1.86	2.35	2.42
1970	1.88	1.77	2.36	2.43
1971	1.91	1.80	2.39	2.45
1972	1.91	1.69	2.42	2.48

^{*}Exclusive of Northern Ireland.

In the period under review the rates for England and Wales and Scotland were consistently higher than those for this country and Northern Ireland.

The death rates from cancer in 1972 in counties and county boroughs are compared in Table XXIV. Standardised rates, which eliminate the effect of different age distributions in the different areas, are also shown.

TABLE XXIV

DEATH RATES (CRUDE AND STANDARDISED) FROM CANCER (Nos. 140-209) IN EACH COUNTY AND COUNTY BOROUGH IN 1972.

The crude death rate from cancer in 1972 varied from 2.66 per 1,000 population in Sligo to 1.05 in Dublin County (remainder). In certain areas, however, the standardised rates were considerably different from the crude rates and when comparing the relative seriousness of mortality in different counties it is, of course, the standardised rates which should be used. In the counties of the west and north-west standardisation had the effect of lowering the death rates considerably. The standardised rates varied from 2.50 per 1,000 population in Waterford County Borough to 1.46 in Kerry. The proportion of deaths not medically certified varies widely between the different areas (see Table 23), thus, the possibility that some cancer deaths in the areas with low medical certification may escape detection should be borne in mind in comparing the death rates between counties.

Full details of deaths due to cancer occurring in 1972 classified by site of the disease and age group are contained in TABLE 19. The number of deaths and death rates from cancer per 100,000 in each age group for the main groups of sites are shown in Table XXV and it will be observed that there is in general a rapid rise in the death rate with increasing age. Deaths due to malignant neoplasms of the digestive system represented nearly half the total cancer deaths for each sex, the death rate for males being 11 per cent higher than that for females. The death rate from malignant neoplasms of the respiratory system was nearly three times greater for males than for females.

CANCER OF THE BRONCHUS, TRACHEA AND LUNG

The number of deaths and death rates from cancer of the bronchus, trachea and lung in each year 1963 to 1972 classified by sex and age group, are shown in Table XXVI.

TABLE XXVI

DEATHS AND DEATH RATES PER 100,000 CORRESPONDING POPULATION IN EACH YEAR 1963 TO 1972 FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG, CLASSIFIED BY SEX AND AGE GROUP.

1972	0.3	9.9	50.0	167.8	279.1	50.8	0.1	3.3	19.5	53.0	77.1	16.9

The main point that emerges from this table is that deaths from cancer of the bronchus, trachea and lung are much more common among males than among females. In 1963 the death rate in the case of males was 34.1 compared with 8.5 in the case of females. In 1972 the corresponding rates were 50.8 and 16.9 respectively. In 1963 females accounted for 19.8 per cent of the deaths, by 1972 their percentage share had risen to 24.8.

The following table shows deaths and death rates from cancer of the bronchus, trachea and lung in Ireland and neighbouring countries during the years 1967 to 1972.

TABLE XXVII

DEATHS AND DEATH RATES IN IRELAND* AND NEIGHBOURING COUNTRIES FROM CANCER OF THE BRONCHUS, TRACHEA AND LUNG IN EACH YEAR 1967 TO 1972.

	1967	1968	1969	1970	1971	1972
Area		1	Number	of deaths		
Ireland*	807	908	852	957	1,004	1,022
Northern Ireland	474	525	544	524	582	542
Scotland	3,150	3,209	3,273	3,443	3,416	3,573
England and Wales	28,250	28,836	29,763	30,284	30,754	31,659
			Rates per 100	,000 population		
Ireland*	28	31	29	33	34	34
Northern Ireland	32	35	36	34	38	35
Scotland	61	62	63	66	65	69
England and Wales	.58	59	61	62	63	65

^{*}Exclusive of Northern Ireland.

The most significant feature of this table is the low rate in Ireland in each year compared with those in the other areas. Throughout the period under review the yearly rates for England and Wales were, in some years, more than double the Irish rates.

DISEASES OF THE CIRCULATORY SYSTEM

There were 17,530 deaths ascribed to diseases of the circulatory system (Nos. 390-458) in 1972 of which 9,362 were deaths of males and 8,168 of females. Details of these deaths, classified by cause and age may be obtained from TABLE 19 of this Report while the numbers assigned to each county and county borough are shown in TABLE 20. Deaths and death rates from certain groups of causes are given in Table XXIX.

The excess of male over female deaths in the case of diseases of the circulatory system is largely accounted for by the greater number of deaths of males from ischaemic heart disease (5,176 males compared with 3,368 females); in respect of the remaining groups of causes the difference between the male and female death rates is not nearly so pronounced.

TABLE XXVIII

DEATHS FROM DISEASES OF THE CIRCULATORY SYSTEM IN 1972 SHOWING THE NUMBERS AND PERCENTAGES NOT MEDICALLY CERTIFIED.

		Males			Females	-
Cause of death	Total	Uncertified	Per cent	Total	uncertified	Per cent

RESPIRATORY DISEASES

Deaths from respiratory diseases (Nos. 460-519 in the International List) in 1972 numbered 4,668, These included 241 deaths caused by influenza, 2,034 by pneumonia, 1,558 by bronchitis and 835 due to other respiratory diseases.

PREGNANCY, CHILDBIRTH AND PUERPERIUM

The number of maternal deaths in 1972 was 28 compared with 17 in 1971. The death rate was 0.41 per thousand maternities. TABLE XXX shows the maternal deaths in 1972 classified by age of mother and cause and also deaths associated with pregnancy, childbirth and puerperium, but not classified as maternal, for the same year.

INFANT AND LATE FOETAL MORTALITY

The terms used in relation to infant and late foetal mortality are defined as follows:-

Infant death: Death at ages under 1 year of live born infant.

Early neo-natal death: Death at ages under 1 week of live born infant.

Neo-natal death: Death at ages under 4 weeks of live born infant.

Post-neo-natal death: Death between the ages of 4 weeks and 1 year of live born infant.

Late foetal death (stillbirth): Foetal death at or over 28 weeks gestation.

Perinatal deaths: Late foetal plus early neo-natal deaths.

Infant mortality rate: Infant deaths divided by total live births, multiplied by 1,000.

Neo-natal mortality rate: Neo-natal deaths divided by total live births, multiplied by 1,000.

Early neo-natal mortality rate: Early neo-natal deaths divided by total live births, multiplied by 1,000.

Late foetal mortality rate: Late foetal deaths divided by total live births plus late foetal deaths, multiplied by 1,000.

Perinatal mortality rate: Perinatal deaths divided by total live births plus late foetal deaths, multiplied by 1,000.

While statistics of infant mortality are obtained in the course of the usual procedure for registration of deaths, which has been in operation since the year 1863, particulars of late foetal mortality are obtained through a scheme of notification to the County Medical Officer of Health. The scheme of notifying late foetal deaths was introduced in 1957, but comparisons between different areas of the country showed marked differences in the coverage of the scheme in the early years. Consequently the number of late foetal deaths in the early years of the scheme is believed to be understated.

It will be seen from Table XXXII that the highest individual rate for infant mortality was in Leitrim and the lowest in Mayo. The rate for perinatal mortality was highest in Monaghan and lowest in Wexford while for late foetal mortality the highest rate was in Monaghan and the lowest in Wexford.

INFANT MORTALITY

During the year 1972 there were 1,236 deaths of infants under one year, an increase of 22 on 1971. The 1972 rate of 18.0 per 1,000 live births is the same as that for 1971 which was the lowest ever recorded.

TABLE XXXIII
INFANT MORTALITY BY AGE, 1941-1960 AND 1963-1972

1966	7.3	5.5	1.3	1.1	0.9	16.3	2.4	1.6	2.7	1.9	8.6	24.9
1967	7.3	5.4	1.4	1.1	0.8	16.0	2.0	1.7	2.8	1.9	8.4	24.4
1968	6.6	5.1	1.1	0.6	0.5	13.9	1.4	1.1	2.4	2.2	7.1	21.0
1969	5.9	6.0	1.0	0.8	0.6	14.3	1.4	0.9	2.1	1.8	6.2	20.6
1970	6.1	4.4	1.1	0.5	0.5	12.8	1.5	0.9	2.5	1.8	6.7	19.5
1971	5.8	4.2	1.1	0.7	0.4	12.2	1.4	1.0	1.8	1.6	5.8	18.0
1972	5.7	4.6	1.0	0.4	0.4	12.1	1.4	1.2	1.7	1.6	6.0	18.0

Infant mortality has shown a considerable decrease in the period covered by the Table, the greatest reductions being in ages between 14 days and under 4 weeks, where the 1968 rates were about one-seventh of those at the start of the period, and in ages over 4 weeks, where the 1968 rate was less than one-fifth of that in the period 1941-50. No significant changes were shown at ages 1-6 days until 1963, since then, apart from an increase in 1964 and again in 1969 there has been a downward trend. No significant changes were shown at ages under 24 hours until 1968 when there was a drop of about 10 per cent in the rate with a further drop of 11 per cent in 1969, the rate rising again in 1970 by 3 per cent. In 1971 however the rate dropped once more by 5 per cent and has remained at the same level in 1972.

Diagram 5

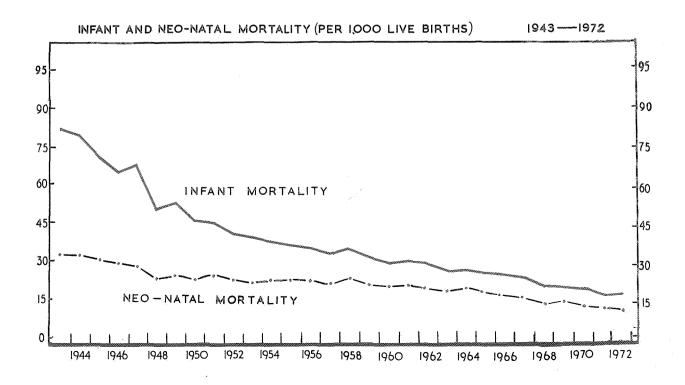

TABLE XXXIV

INFANT MORTALITY RATES IN IRELAND* AND NEIGHBOURING COUNTRIES, 1941-1960 AND 1963-1972

		Deaths of infants under 1	year per 1,000 live births	
Period	Ireland*	Northern Ireland	England and Wales	Scotland
1941-50	66	60	43	57
1951-60	37	32	25	30.
1963	27	27	21	26
1964	27	26	20	24
1965	25	25	19	25
1966	25	26	19	23
1967	24	23	18	21
1968	21	24	18	21
1969	21	24	18	21
1970	19	23	18	20
1971	18	23	18	20
1972	18	21	18	19

^{*}Exclusive of Northern Ireland.

As can be seen from Table XXXIV the decline in infant mortality has been greater in Ireland than in any of the other areas.

The causes of deaths of infants under one year, classified according to the Detailed International List, are shown in TABLE 19. In TABLE 26 infant deaths are again classified by cause and a more detailed age classification shown. These results are summarised in Table XXXV.

TABLE XXXV

LATE FOETAL DEATHS AND DEATHS OF INFANTS UNDER 1 YEAR REGISTERED IN 1972 CLASSIFIED BY CAUSE AND AGE.

International		deaths	ler 1 year				
List Numbers	Cause	foetal		to	to	4 weeks to 1 year	Total under 1 year
008, 009	Enteritis and other diarrhoeal diseases	-	-	1	7	15	23
Rem. 000-136	Other infective and parasitic diseases	-	-	6	5	19	30
320	Meningitis	-	-	6	1	11	18
460-519	Influenza, pneumonia, bronchitis, emphysema, asthma and other respiratory diseases	-	4	1	7	61	73
520-577	Diseases of the digestive system	-	-	-	- .	-	-
740-759	Congenital anomalies	192	96	74	53	119	342
764-768, 772	Birth injuries	27	22	28	12	3	65
774, 775	Haemolytic disease of newborn	62	17	9	1	2.	29
776	Anoxic and hypoxic conditions not elsewhere classified (including asphyxia and atelectasis)	106	136	115	5	2	258
777	Immaturity, unqualified	12	92	36	7	3	138
778	Other conditions of foetus or newborn (including haemorrhagic disease)	3	5	12	1	1	19
	Other causes	494	21	26	21	173	241
	TOTAL	901	393	314	120	409	1,236

It will be seen that the relative importance of the various groups of causes differ appreciably between deaths at ages under one week and deaths at ages 4 weeks to one year. Of all deaths at ages under one week, 18 per cent were ascribed to immaturity, congenital anomalies accounted for 24 per cent, anoxic and hypoxic conditions not elsewhere specified (including asphyxia and atelectasis) 36 per cent and birth injuries 7 per cent.

At ages over 4 weeks respiratory diseases, congenital anomalies, and enteritis and other diarrhoeal diseases were the main causes of death. Details of the 241 deaths included as other causes will be found in Table 19 where it will be noted that 39 of them were due to accidents.

LATE FOETAL DEATHS

The number of late foetal deaths notified in each year since the scheme was introduced is as follows:—

Year	Late Foetal Deaths
Average 1957-1966	1,215
1967	1,000
1968	934
1969	893
1970	904
1971	881
1972	901

The causes of late foetal deaths notified in 1972 classified according to the Detailed International List are given in Table 29. The results are summarised in Table XXXVI.

TABLE XXXVI LATE FOETAL DEATHS AND RATES* PER 1,000 TOTAL BIRTHS BY CAUSE, 1972.

International List Numbers	Cause	Number of Late foetal Deaths	Rate per 1,000 total Births
740	Anencephalus	119	1.71
741	Spina bifida	15	0.22
742	Congenital hydrocephalus	29	0.42
743	Other congenital anomalies of nervous system	1	0.01
746	Congenital anomalies of heart	2	0.03
750	Other congenital anomalies of upper alimentary tract	2	0.03
755	Other congenital anomalies of limbs	3	0.04
756	Other congenital anomalies of musculosketal system	2	0.03
758	Other and unspecified congenital anomalies	5	0.07
759	Congenital syndromes affecting multiple systems	14	0.20
760	Chronic circulatory and genito-urinary diseases in mother	9	0.13
761	Other maternal conditions unrelated to pregnancy	24	0.35
762	Toxaemia of pregnancy	62	0.89
763	Maternal ante- and intrapartum infection	3	0.04
765	Difficult labour with disproportion, but no mention of abnormality of pelvis	3	0.04
766	Difficult labour with malposition of foetus	13	୦.19
767	Difficult labour with abnormality of forces of labour	1	0.01
768	Difficult labour with other and unspecified complications	.5	0,07
769	Other complications of pregnancy and childbirth	8	0.12
770	Conditions of placenta	183	2.64
771	Conditions of umbilical cord	52	0.75
772	Birth injury without mention of cause	5	0.07
774	Haemolytic disease of newborn with kernicterus	1	0.01
775	Haemolytic disease of newborn, without mention of kernicterus	61	0.88
776	Anoxic and hypoxic conditions not elsewhere classif ed	106	1.53
777	Immaturity, unqualified	12	0.17
778	Other conditions of foetus or newborn	8	0.12
779	Foetal deaths of unknown cause	153	2.20
	ALL CAUSES	901	12.98

^{*}For definition-see page xxxv.

More late foetal deaths resulted from placental and cord injuries than from any other group, being 26 per cent of the total deaths. Congenital anomalies of foetus was next at 21 per cent and haemolytic disease of the newborn at 7 per cent. Of the total deaths 17 per cent were classified as being due to ill-defined or unknown causes.

As can be seen from Table XXXVII 833 late foetal deaths in 1972 occurred in hospitals; this is equivalent to 92 per cent of the total number of late foetal deaths. From the same table it may be observed that over half of all late foetal deaths were of period of gestation 37 weeks and over.

TABLE XXXVII

LATE FOETAL DEATHS NOTIFIED IN THE YEAR 1972 CLASSIFIED BY PERIOD OF GESTATION AND PLACE IN WHICH CONFINEMENT OCCURRED.

weeks and over	Place of confinement									
remod or gestation	Hospital	Maternity Home	Domiciliary	Total						
28-36 weeks	394	16	9	419						
37 weeks and over	439	30	13	482						
TOTAL	833	46	22	901						

The perinatal and late foetal mortality rates in Ireland and neighbouring countries from 1965 to 1972 compare as follows:—

TABLE XXXVIII

PERINATAL AND LATE FOETAL MORTALITY RATES* IN IRELAND† AND NEIGHBOURING COUNTRIES, 1965-1972.

		Late foetal r	nortality rate			Perinatal m	ortality rate	
Year	Ireland†	Northern Ireland	England and Wales	Scotland	Ireland†	Northern Ireland	England and Wales	Scotland

^{*}For definition see page xxxv.

ACCIDENTS, POISONING AND VIOLENCE

The number of deaths from external causes (Numbers E800-E999) occurring in 1972 was 1,680 of which 1,077 were males and 603 females. The corresponding figures for 1971 were 1,481,951 and 530 respectively. In the Eight Revision there is also a classification for deaths from external causes which are not specified as accidental or suicidal and which accounted for 68 deaths in 1972 (Table XL). In the Seventh Revision, 39 of these deaths would have been in the category Accidental drowning and 24 in the category Accidental poisoning, so for comparison with former years, they have been grouped with these categories in Table XXXIX.

TABLE XXXIX
DEATHS FROM ACCIDENTS, POISONING AND VIOLENCE, 1963 TO 1972.

International List Numbers 8th Revision	Cause of death	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972

	TOTAL	1,076	1,072	1,088	1,169	1,197	1,338	1,360	1,414	1,481	1,680

As can be seen from Table XL there is an excess of male mortality from accidents at all ages between 1 and 75 years. In these age groups the excess of male deaths may be largely attributed to the category Road Vehicle Accidents. At ages over 75 years, the excess of female deaths may be attributed to accidental falls, as can be seen from Table XLI. The vast majority of these falls occurred in the home (Table XLI).

There were 580 deaths resulting from accidents in the home recorded in 1972 compared with 461 in 1971. As will be seen from Table XLI 403 deaths in 1972 were attributed to accidental falls in the home and these were mostly of elderly persons. Accidents caused by fire, hot liquids, etc., accounted for 66 deaths, of which 9 were of children under 5 years of age and 49 of persons aged 45 years and over. Twenty-nine deaths of children under one year old were due to obstruction and suffocation by food and 4 to accidental mechanical suffocation. There were 27 deaths from accidental poisoning, 20 of which were of persons aged 25 years and over.

UNCERTIFIED DEATHS

The number of cases in 1972 in which the cause of death was not certified by a medical practitioner was 380 which represents 1.1 per cent of the total deaths. In TABLE 23 uncertified deaths in 1972 are shown classified by county and age group, while the percentage of deaths uncertified in each county is also shown. The proportion of deaths uncertified is very high in the west, being highest in the year 1972 in the counties Mayo (5.1 per cent) and Leitrim (4.0 per cent).

Table XLII compares the percentages of deaths uncertified in each province for a number of years, and it will be observed that a steady improvement in the position is taking place, the percentage for 1972 being only one-twelfth of the average for the period 1941-50.

TABLE XLII

UNCERTIFIED DEATHS AS A PERCENTAGE OF THE TOTAL IN EACH PROVINCE IN THE
YEARS 1941 TO 1960 AND 1963 TO 1972

Province •	1941-50	1951-60	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972
Leinster	5.6	3.1	1.4	1.2	1.1	1.0	0.8	0.7	0.7	0.6	0.6	0.5
Munster	12.1	8.1	4.2	3.3	3.0	2.5	2.3	1.6	1.6	1.3	1.1	0.9
Connacht	28.1	20.0	11.0	8.9	9.3	6.9	6.0	4.9	4.8	4.2	3.6	3.1
Ulster (part of)	22.0	13.8	6.4	5.3	4.8	3.7	3.5	3.2	2.1	2.0	1.8	1.6
TOTAL	13.0	8.5	4.2	3.4	3.3	2.6	2.3	1.9	1.7	1.5	1.3	1.1

TABLE XLIII
PERCENTAGE OF DEATHS UNCERTIFIED BY AGE GROUPS, IN EACH PROVINCE IN 1972

Province	All ages	Under 1 year	1-14	15-24	25-34	35-44	45-54	55-64	65-74	75 and over
Leinster	0.5		-	<u>.</u>	-	0.3	0.6	0.5	0.4	0.6
Munster	0.9	0.5	- -	0.8	-	<u>-</u>	0.5	0.2	0.3	1.5
Connacht	3.1	-	-	•	-	-	0.4	0.9	1.6	4.9
Ulster (part of)	1.6	-	-	F			0.7	0.7	1.0	2,5
TOTAL	1.1	0.2	-	0.2		0.1	0.5	0.5	0.6	1.8
Actual number of deaths uncertified	380	2	-	1	-	1	11	22	52	291

The proportion of deaths uncertified was highest in the age group 75 years and over; this age group accounted for more than four-fifths of the uncertified deaths. In most age groups the provinces of Connacht and Ulster (part of) compare unfavourably with Leinster and Munster in respect of the percentage of deaths uncertified.

INQUEST AND POST-MORTEMS

The number of deaths registered on certificates issued by coroners as the result of inquest and post-mortem examinations during 1972 was 2,967 compared with 1,808 in 1971.
