## Index of Employment in Construction

January 2008 (Provisional)  
December 2007 (Final)

### Employment in Construction (Base year 2000=100)

#### Monthly Index

January 2007 110.0

January 2008 98.7

% annual change -10.3%

### Numbers employed down 10.3% in January

Employment in private firms (with five or more persons engaged) in the construction industry decreased by 10.3% in January 2008 by comparison with January 2007. The monthly employment index decreased from 110.0 in January 2007 to 98.7 in January 2008. *See Table 1.*

The final figure for December 2007 showed a decrease of 6.3% when compared with December 2006.

This data series is available on the CSO's data dissemination service. See [www.cso.ie](http://www.cso.ie) and go to Database Direct.

*This inquiry covers firms with five or more persons employed.*

## Background Notes

### Scope and Background

This series of monthly indices is based on trends shown by a monthly employment sample inquiry covering approximately 1,000 private building and construction firms with 5 or more persons engaged; i.e. firms classified to division 45 of the NACE Industrial Classification of Economic Activity in the European Communities (NACE Rev.1.1).

This series is also available using the interactive tables in Database Direct on [www.cso.ie](http://www.cso.ie).

### Definition of Persons Engaged

The number of persons engaged is defined to include proprietors and family members working in the firm, employees (operatives, managerial, technical and clerical staff) and persons working for the firms on a labour-only subcontract basis. The number of persons in the latter category is not always known to the respondent firms and this influences the accuracy of the index.

### Methodology

Respondent firms to the monthly sample inquiry are classified into three size categories, namely 5-19, 20-99 and 100 or more persons engaged. The percentage changes in employment levels for the current month over the same month in the previous year, derived from matched samples of respondents in each of these three size categories, are weighted together to give an overall percentage change. This annual change is applied to the index for the corresponding month of the previous year to give the index for the current month.
