# Industrial Earnings and Hours Worked <br> March 2006 (Final) <br> June 2006 (Preliminary Estimates) 

|  | All Industries |  |  |
| ---: | ---: | ---: | ---: |
| Average earnings <br> per hour | Average earnings <br> per week | Average hours <br> per week |  |
| June 2005 | $€$ | $€$ |  |
| March 2006 | 14.34 | 577.74 | 40.3 |
| June 2006 | 14.74 | 585.56 | 39.7 |
| Quarterly Change | 15.05 | 602.35 | 40.0 |
| Annual Change | $+2.1 \%$ | $+2.9 \%$ | $+0.8 \%$ |
|  | $+5.0 \%$ | $+4.3 \%$ | $-0.7 \%$ |

## Average Industrial Earnings up 4.3\% in year to June 2006

Preliminary estimates of Industrial Earnings for June 2006 show that the average weekly earnings of Industrial Workers in All Industries increased by $4.3 \%$ when compared with June 2005. Industrial hourly earnings rose by $5.0 \%$ while average hours worked decreased by $0.7 \%$ for the same period.

Average weekly earnings of All Employees (Industrial, Clerical and Managerial) rose by $3.2 \%$ in the year to June 2006 (see Table 4). This rise consists of increases of $4.3 \%$ for Industrial Employees and $1.9 \%$ for Clerical and Managerial employees combined.

All indices in this release are now shown to base year September $2000=100$. Retrospective data back to September 1995 are available on the CSO website www.cso.ie.

For more information contact Mary Murphy at 021-453 5094 or Ann Hickey at 021-453 5508.

## Background Notes

Introduction This release provides estimates of the average earnings and hours worked for all industrial workers in the state. The average earnings estimates for different categories of employees and sectors reflect different mixes of occupations and skills and do not therefore represent earnings for comparable work.

## Methodology Averages:

The estimates of average weekly earnings, hourly earnings and hours worked are compiled by weighting the averages for all sample units in each NACE x Size cell (using 3 size categories 10-49, 50-99 and $100+$ persons engaged) by estimated total employment in each of these cells.

## Indices:

The corresponding indices are compiled using an annual chain-linked Laspeyres formula based on a matched respondent sample. The ratio of average earnings (or hours worked) in the current quarter over the previous September is calculated for 8 basic employee categories in each NACE x Size cell and combined for broader groupings using as weights estimated total earnings (or total hours worked) in the previous year. This system excludes the effects of changes in employment composition and industrial structure implicitly reflected in the corresponding absolute average earnings estimate. The indices, therefore, can be referred to as indices of underlying trends.

## Changes from Previous Series:

Some minor methodological changes from the previous series to the new series have resulted in slight differences in estimates for retrospective periods. The methodological changes are:-

## Sectoral Classification

The sectoral classification used in this series is NACE Rev 1, which is already being used for the Census of Industrial Production and the Monthly Production Index.
Employment Adjustment
In the previous series, adjustments were carried out at the level of the reporting unit in order to align employment estimates with those reported in the Census of Industrial Production. For the new series, this practice has been discontinued.

## Weighting

In the previous series, the weights for the lowest size category (10-49 persons engaged) also reflected the employment of units with fewer than 10 persons engaged. The new series explicitly covers units with 10 or more persons engaged.

## Definitions Industrial Workers:

This employment category includes operatives, maintenance workers, storekeepers, packers, cleaners, basic supervisory staff and apprentices.

## Managerial Workers:

Administrative, managerial and technical workers are included in this category.

## Clerical Workers:

This employment category includes clerical and other office staff and sales representatives.

## Gross Earnings:

This is defined as the gross amount paid to employees before deduction of income tax, PRSI, etc. including overtime, service pay, shift and other allowances, commissions, production and regular bonuses, etc. Irregular bonuses, back-pay and redundancy payments are excluded.

## Hours Worked:

These include the normal working hours of employees on holidays or sick-leave with pay; this ensures the compatibility of the earnings and hours worked data for the estimation of average hourly earnings. Overtime hours are included on the basis of hours actually worked.

    ${ }^{1}$ Unit Wage Costs Index
    This series indicates the trend in wage costs per unit of output. It is derived by dividing the index of average hourly earnings by the output per hour index
    ${ }^{2}$ Output per person Index
    This series indicates the trend in the volume of production (as published in the CSO release "Industrial Production Index") per person engaged (as published in the CSO release "Industrial Employment"). It is derived by dividing the Industrial Production volume index by an index of persons engaged.
    ${ }^{3}$ Output per hour Index
    This series indicates the trend in the volume of production per hour worked. It is derived by dividing the output per person index by the index of average weekly hours worked.
    ${ }^{4}$ Amended since published on 30 June 2006
